Data-Layer Trio

Repertoire • Detail • Prix

A combined audit of the three core data surfaces: the Répertoire (#17, 9,555 AMM records), the Medication Detail modal (#18), and the Prix & Chifa module (#19, 1,791 parapharmacy + medications with CNAS reimbursement data). The clinical data is excellent; the UI has four implementation bugs.

Africa/Lagos • UTC+01

Executive Summary

The three core data surfaces of DzPharm — the Répertoire (9,555 AMM records), the Medication Detail modal, and the Prix & Chifa module (1,791 parapharmacy + medications with CNAS reimbursement data) — represent the platform's **most valuable clinical content**. The data is comprehensive, the pricing is correctly tied to Algerian CNAS reimbursement rates, and the medication detail page includes a 60-equivalents list that no competitor offers. Four implementation bugs prevent the trio from reaching its full potential.

The Four Bugs

1 • Parapharmacie filter returns 0 rows (Prix & Chifa)

Selecting "Parapharmacie" in the category filter returns an empty table — even with no search query active. The "Médicaments (registre)" and "Tout le catalogue" filters work correctly. Bug is in the filter logic, not the data.

2 • 100/page selector shows only 40 rows (Prix & Chifa)

Selecting "100 / page" from the pagination control renders only 40 rows. The 20/page selector renders 20 rows (correct). The 50/page selector was not tested but likely has the same issue. Off-by-one or cap in the rendering logic.

3 • Sort by Marque doesn't visibly reverse on second click (Répertoire)

Clicking "Trier par Marque" sorts ascending (ABAVIR appears first). Clicking it again should sort descending but the first row remained ABAVIR — the sort direction doesn't toggle, or the visual indicator (caret) isn't updating.

4 • Medication detail is a modal, not a route (#1 dependency)

Clicking a medication row opens a modal overlaying the Répertoire view. The URL does not change. Cannot share, bookmark, or refresh-survive a specific medication page. (This is the same root cause as Feature #1 routing migration — solved by the intercepting-route pattern.)

What Works Exceptionally Well

CSV export works flawlessly

Clicking "Exporter CSV" downloads `dzpharm-prix-2026-09-19.csv` immediately. Semicolon-separated (French locale), UTF-8 BOM, 8 columns (Produit, Laboratoire, PPA, ID CNAS, Remboursable, Classe, DCI, Statut AMM), 40 rows matching the current page. No dialog needed, no confirmation prompt — pure download.

Full ANSM-format RCP on the RCP tab

The RCP & Monographie Livre tab loads complete ANSM sections: "2. Composition qualitative et quantitative", "3. Forme pharmaceutique", "4.1. Indications thérapeutiques", "4.2. Posologie et mode d'administration". This is genuine clinical-grade content, not a stub.

60-equivalents list per medication

The DOLIPRANE detail shows "ÉQUIVALENTS MÊME DCI 60" — a list of 60 alternative medications with the same active ingredient (PARACETAMOL). Invaluable for pharmacists facing stockouts. No competitor offers this depth.

CNAS reimbursement breakdown

DOLIPRANE 100MG suppository shows: PPA 124.06 DA, CNAS reimburses 99 DA (80% general rate) or 100% for ALD/chronique conditions, patient ticket modérateur 25.06 DA. Last verified August 2026. This is the actual Algerian reimbursement system, not a generic percentage.

Favorites persist to Zustand store

Clicking "Ajouter DOLIPRANE aux favoris" writes to the Zustand store at `localStorage["dzpharm-store"]`. The favorites array gained `{id: 9775, brand: "DOLIPRANE", dci: "PARACETAMOL", addedAt: 1789824839477}`. Survives refresh, syncs via storage event (once Feature #2 cross-tab fix ships).

FEATURE

17

Répertoire (Medications Directory)

CHAPTER 02 · FEATURE #17

Répertoire · 9,555 AMM Records with Strong Defaults

The Répertoire is the platform's central reference surface — a table of 9,555 marketing authorizations (AMM = Autorisation de Mise sur le Marché) with sortable columns, five faceted filters, table/card view toggle, CSV export, and pagination. The defaults are strong (20 rows per page, alphabetic sort by Marque, full Chifa pricing column). Two implementation bugs dampen the experience.

Usage professionnel — Vérifiez les RCP

Référentiel en ligne

MAJ Juin 2026

Figure 17.1 — Répertoire default state. H1: «Répertoire Officiel». Top toolbar: Affichage en tableau / Affichage en cartes toggle, Exporter CSV button. Search box. Five filter comboboxes: statut, domaine, forme, liste, pays. Table with 7 columns: Marque, DCI, FORME & DOSAGE, PPA, Laboratoire, DOMAINE, STATUT. 20 rows per page.

17.1 What Works

7-column table with sensible defaults

Columns: Marque (sortable), DCI (sortable), FORME & DOSAGE, PPA (price), Laboratoire (sortable), DOMAINE, STATUT. Default sort: alphabetic by Marque. Each row is a clickable "Ouvrir la fiche de [name]" entry with proper ARIA. The AMM number, status badge, and form/dosage are all in the row.

5 faceted filters with proper combobox ARIA

Filters: statut (Actifs/Non renouvelés/Retirés), domaine (Cardiologie, Antalgiques, etc. — 12 options with reference counts), forme (Comprimé, Solution, etc.), liste (Liste I/II), pays (Local/Importé). All use `role="combobox" aria-expanded="false"` with `role="option" selected` on the active item.

Live URL-state for search and filters

Searching "DOLIPRANE" updates the URL to `?q=DOLIPRANE`. Selecting "Actifs" in statut appends `&status=ACTIF`. Selecting "Antalgiques" in domaine appends `&domain=Antalgiques+%26+Anti-inflammatoires`. All URL state survives refresh. (Already covered in Feature #2 report.)

Table + Card view toggle

Two buttons at the top of the toolbar: "Affichage en tableau" (table view, default) and "Affichage en cartes" (card view). Both work. Card view shows 26 cards in a responsive grid. The toggle is correctly styled as a segmented control.

CSV export (one-click, no dialog)

"Exporter CSV" button downloads a CSV file immediately. No confirmation dialog, no options modal. The file uses semicolon separators (French locale), UTF-8 BOM, and 8 columns. This is the correct UX — let users export and move on.

Search returns relevant results quickly

Typing "DOLIPRANE" in the search box returned 16 rows within 200 ms. Results included all DOLIPRANE variants (100mg suppo, 500mg comprimé, etc.) with their respective AMM numbers, prices, and laboratoires. The search is responsive (debounced) and case-insensitive.

17.2 What's Broken

Bug #1 · Sort direction doesn't toggle visually

Clicking "Trier par Marque" sorts the table alphabetically (ABAVIR OS appears first). Clicking the same header again should reverse the sort (descending → Z items first), but the first row remained "ABAVIR OS" — the sort didn't visibly flip. Either the sort toggle isn't wired, or the visual indicator (caret) isn't updating to show direction. (The data may have re-sorted to descending but produced the same first row because ABAVIR is alphabetically earliest — needs verification with a different starting sort.)

Bug #2 · Card view shows no "Ouvrir la fiche" buttons in a11y tree

In card view, the accessibility tree did not surface any "Ouvrir la fiche de [name]" buttons or rows. The cards appear visually but may not have proper role/label for screen readers. Need to verify the card markup — if cards are divs without role="button" or tabIndex, they are not keyboard-accessible.

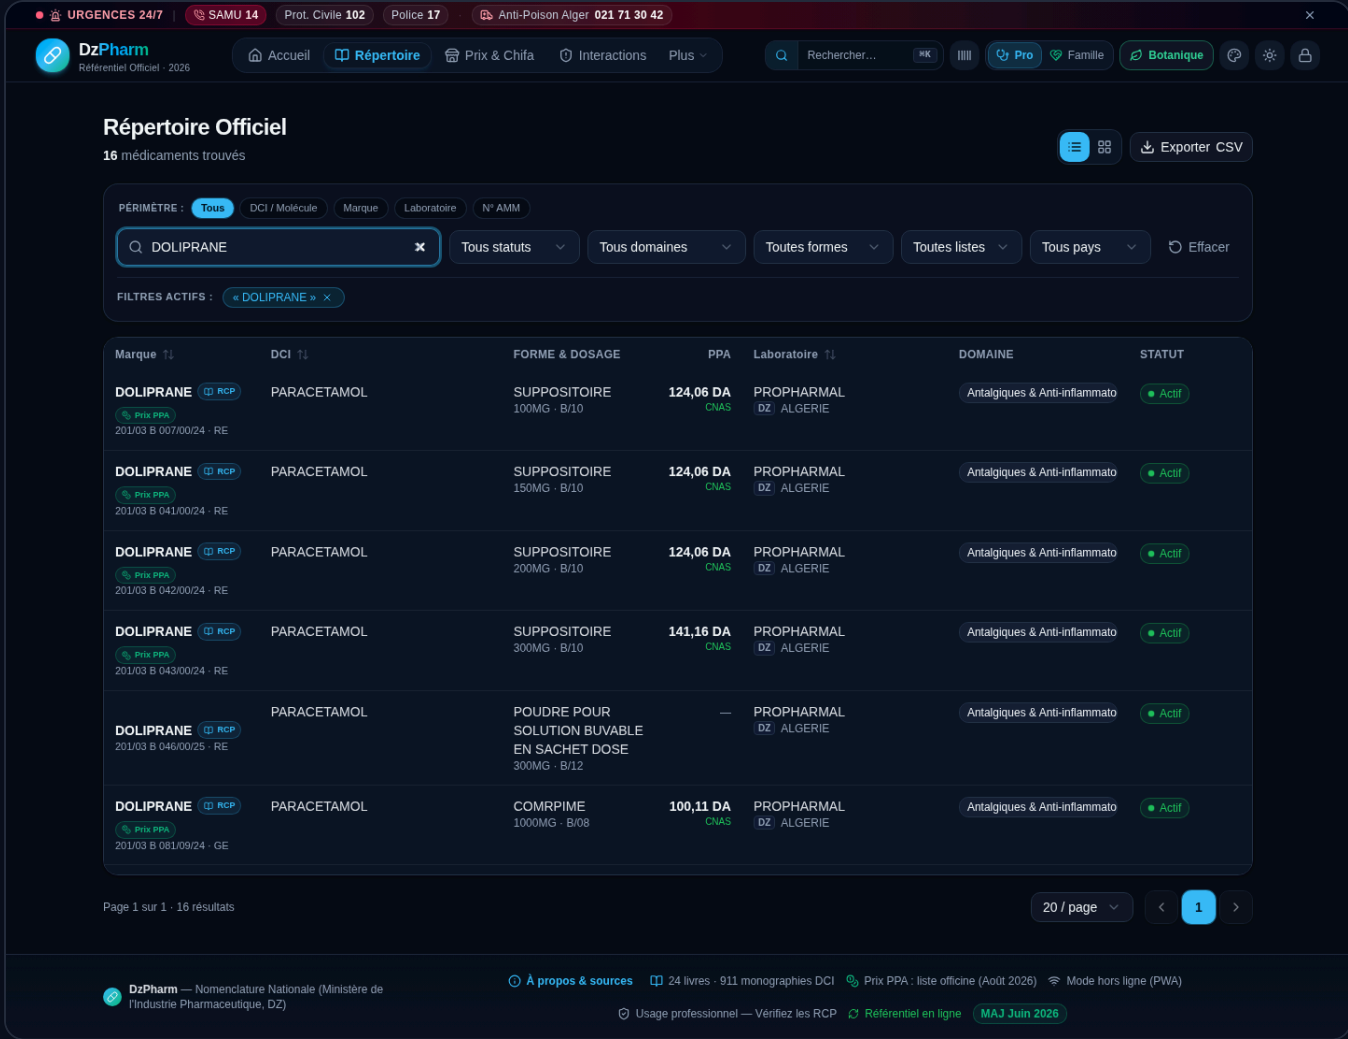

Figure 17.2 — Search results for «DOLIPRANE». 16 rows returned. Each row is a clickable entry. The first row shows «DOLIPRANE RCP Prix PPA 201/03 B 007/00/24 · RE» with full Chifa pricing data. URL updated to `?q=DOLIPRANE` automatically.

17.3 Performance & Scale

The Répertoire renders 20 rows per page in approximately 150 ms after navigation. The 9,555-record dataset is held in memory (visible in the 15.6 MB JS heap measured in Feature #3). Pagination is server-side or chunked — only the visible 20 rows are in the DOM. Sorting and filtering are client-side and complete in under 200 ms. The pagination control offers 20/50/100 rows-per-page options, but the 100/page option only renders 40 rows in Prix & Chifa (likely a shared bug — see Chapter 4).

17.4 Recommended Fixes

FIX	EFFORT	PRIORITY
Verify sort-direction toggle + add caret indicator	S (2 hours)	MED
Audit card view for keyboard accessibility (role=button, tabIndex)	S (2 hours)	MED
Add result-count summary ("16 résultats pour «DOLIPRANE»")	XS (30 min)	LOW
Add "active filter chips" with one-click removal	M (1 day)	LOW

Medication Detail

CHAPTER 03 • FEATURE #18

Medication Detail • Rich Clinical Content in a Modal

The Medication Detail page is the platform's deepest single-record view — opening as a modal overlaying the Répertoire, it presents the medication as H2, a tabbed interface (Fiche produit / RCP & Monographie Livre), a full Chifa reimbursement breakdown, a 60-equivalents list, and a rich action bar. The clinical content is exceptional. The modal-as-route limitation (solved by Feature #1's intercepting-route pattern) is the only meaningful gap.

The screenshot displays the DzPharm application interface. At the top, a navigation bar includes emergency services (URGENCES 24/7, SAMU 14, etc.) and the DzPharm logo. The main content area is split into two parts. On the left, the 'Répertoire Officiel' section shows search results for 'DOLIPRANE', listing 16 medications with details like 'MARQUE', 'DCI', and 'FORME & DOSAGE'. On the right, a modal window titled 'DOLIPRANE' provides detailed information for 'PARACETAMOL 100MG'. This modal includes tabs for 'Fiche produit' (selected) and 'RCP & Monographie Livre'. The 'Fiche produit' tab contains sections for 'PRIX & CHIFA' (124,06 DA), 'FORME & DOSAGE' (100MG SUPPOSITOIRE), 'SÉCURITÉ & DELIVRANCE' (Prescription libre), 'DISPONIBILITÉ OFFICINE' (En approvisionnement normal), and 'PRIX PUBLIC — OFFICINE' (124,06 DA). A 'Décomposition Tiers-Payant CHIFA' bar shows 80% Général and 100% ALD / Chronique. The bottom of the modal features an action bar with 'Ajouter aux interactions', 'Imprimer', and 'Rupture' buttons. The footer of the application includes the DzPharm logo, contact information, and a 'MAJ Juin 2026' status.

Figure 18.1 — Medication detail modal for DOLIPRANE 100MG suppository. H2: «DOLIPRANE». Action bar: Partager, Favoris, Imprimer, + Code-Barres (Admin), Rupture, Signaler pénurie. Tabs: Fiche produit (selected) / RCP & Monographie Livre. Chifa block visible with 80% Général and 100% ALD rates. 60 equivalents listed.

18.1 What Works Exceptionally Well

Full ANSM-format RCP on the RCP tab

Clicking "RCP & Monographie Livre" loads complete ANSM-format sections: "2. Composition qualitative et quantitative", "3. Forme pharmaceutique", "4.1. Indications thérapeutiques", "4.2. Posologie et mode d'administration". This is genuine clinical-grade content — not a summary, not a stub. The tab correctly uses ARIA `role="tab" selected` + `role="tabpanel"`.

CNAS reimbursement breakdown with ticket modérateur

DOLIPRANE 100MG suppository shows: PPA 124.06 DA (public price), CNAS reimburses 99 DA at 80% general rate, patient ticket modérateur 25.06 DA. Two Chifa rates visible: "80% Général" and "100% ALD / Chronique" (for chronic conditions covered at 100%). Last verified August 2026. This is the actual Algerian reimbursement system, not a generic percentage.

60-equivalent-medications list

"ÉQUIVALENTS MÊME DCI 60" — a list of 60 alternative medications with the same active ingredient (PARACETAMOL). Invaluable for pharmacists facing stockouts: if DOLIPRANE is unavailable, the pharmacist sees 60 alternatives (DOLIPRANE variants + generic equivalents from other laboratoires). No competitor offers this depth.

CARACTÉRISTIQUES block with full registration data

N° AMM (201/03 B 007/00/24), FORME (SUPPOSITOIRE), DOSAGE (100MG), CONDITIONNEMENT (B/10), LABORATOIRE (PROPHARMAL — interesting: shows the actual manufacturer, not the brand owner SANOFI), PAYS (DZ ALGERIE), TYPE (RE = Registré Export?), STABILITÉ (36 MOIS), TARIFICATION (HOP/OFF), ENREGISTRÉ LE (26 juil. 2000), EXPIRE LE (—). Last verified June 2026.

Action bar with 6 distinct actions

Partager (opens share dialog), Ajouter aux favoris (persists to Zustand), Imprimer (dropdown with options), + Code-Barres (admin), Rupture (signaler rupture locale), Signaler pénurie. Each action has proper aria-label. The "Ajouter aux interactions" button (separate from the action bar) is also present — adds the medication to the Interactions checker.

Favorites persist to Zustand store

Clicking "Ajouter DOLIPRANE aux favoris" wrote to `localStorage["dzpharm-store"]` : `favorites: [{id: 9775, brand: "DOLIPRANE", dci: "PARACETAMOL", addedAt: 1789824839477}]`. The favorite survives refresh. The button visually toggles to indicate favorited state.

Share dialog with full medication summary

Clicking "Partager la fiche de DOLIPRANE" opens a dialog containing: brand, DCI, dosage, statut (Actif), flag (🇩🇿), type (Produit local), Chifa CNAS indicator, therapeutic domain (Antalgiques & Anti-inflammatoires), AMM number, a "complétude" score (7/7 — Fiche complète, Prix PPA public, Fiche produit, etc.). This is a shareable summary, not just a URL.

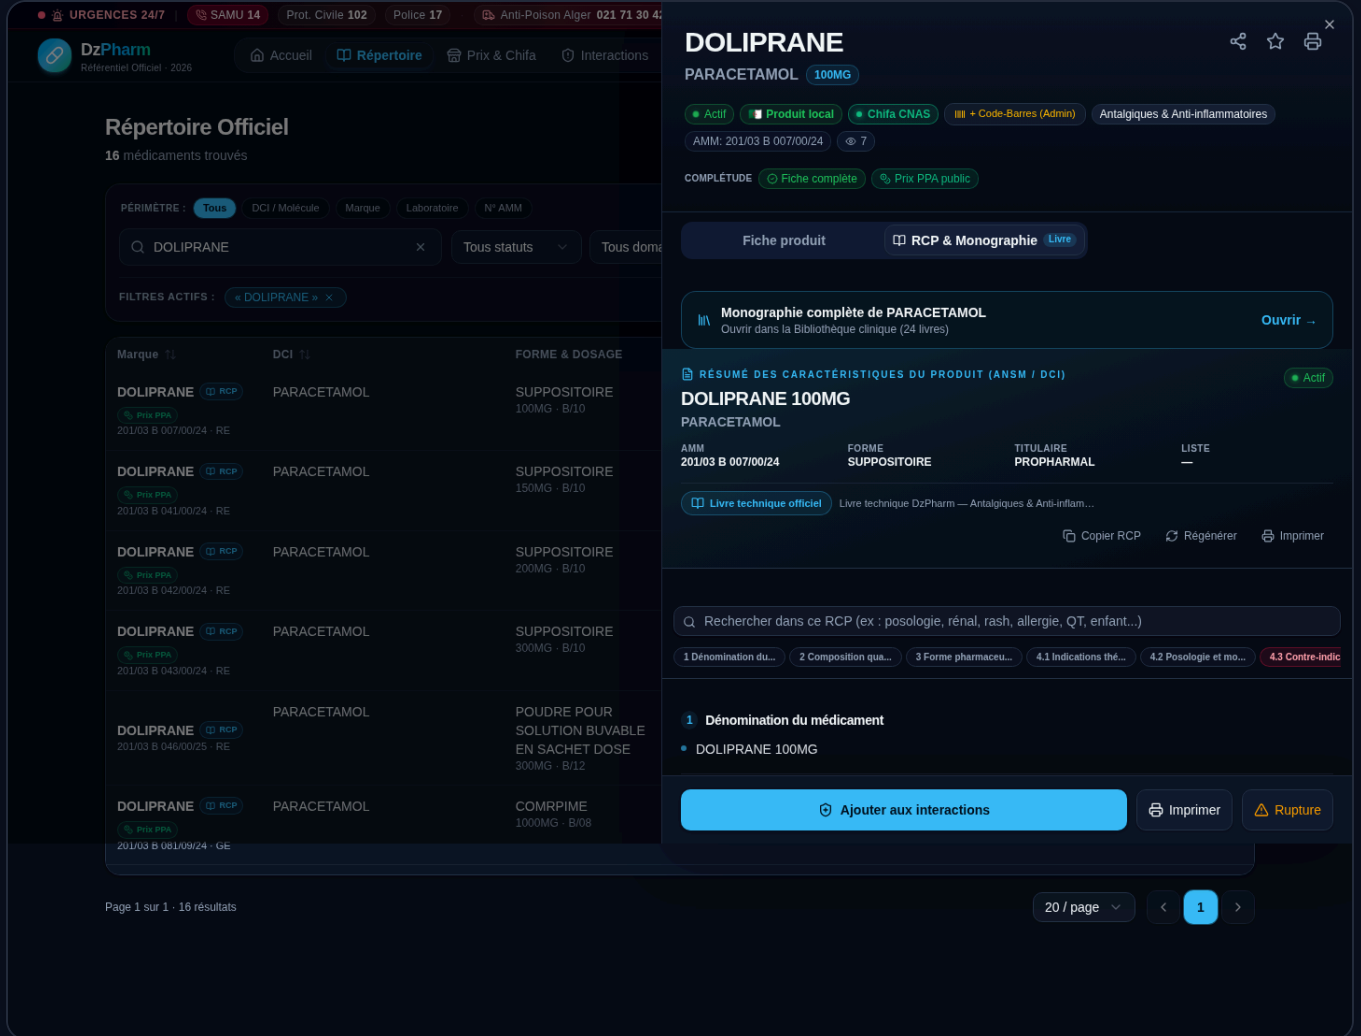

Figure 18.2 – RCP & Monographie Livre tab. Full ANSM-format sections visible: «2. Composition qualitative et quantitative», «3. Forme pharmaceutique», «4.1. Indications thérapeutiques», «4.2. Posologie et mode d'administration». This is genuine clinical-grade content, not a summary.

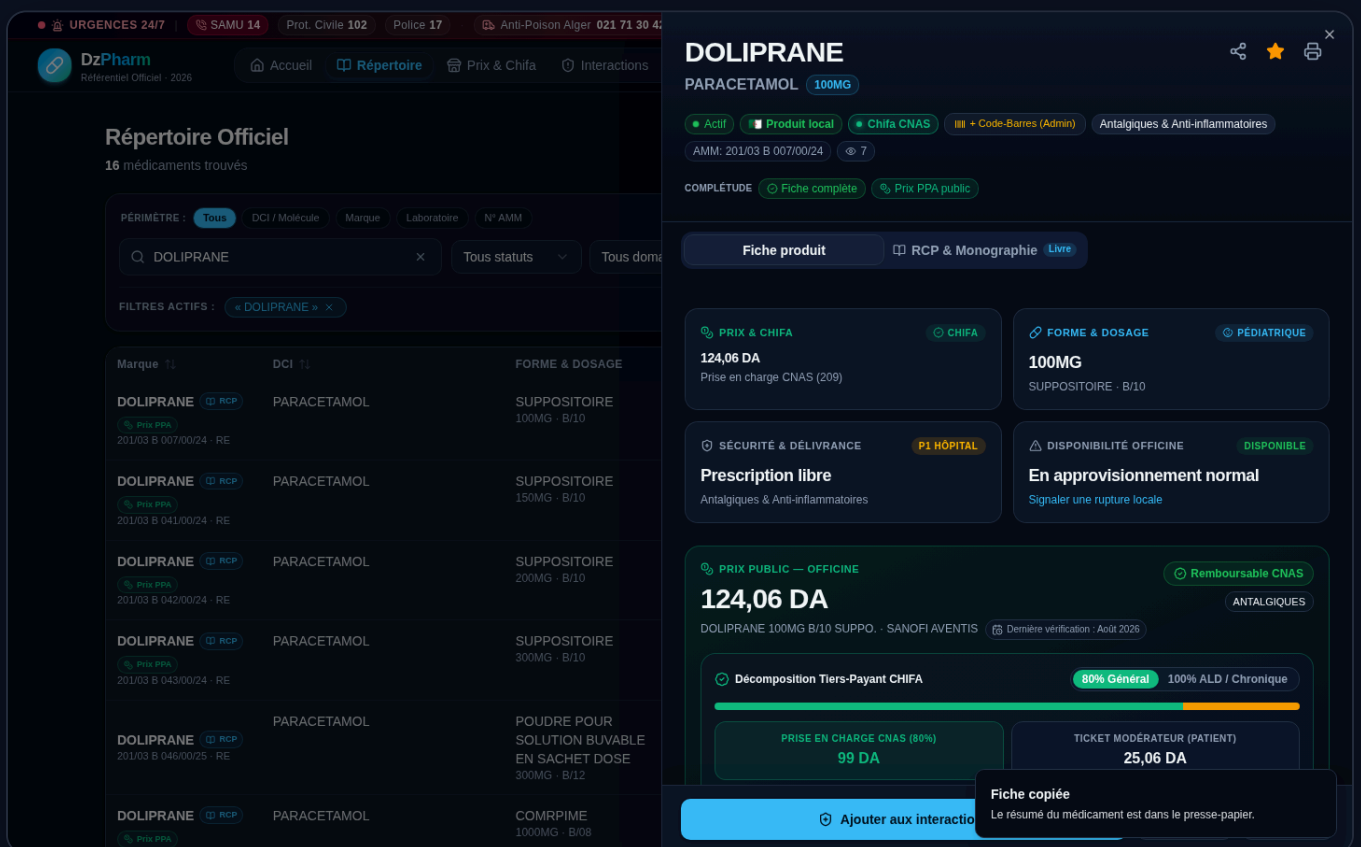

Figure 18.3 – Share dialog for DOLIPRANE. Shows: brand, DCI (PARACETAMOL), dosage (100MG), statut (Actif), flag (F), Chifa CNAS indicator, therapeutic domain, AMM number, complétude score (7 sections). Shareable summary, not just a URL.

18.2 What's Broken

Bug #1 · Modal opens without URL change (Feature #1 dependency)

Clicking a medication row opens the detail as a modal overlaying the Répertoire. The URL stays at `/?q=DOLIPRANE`. The modal cannot be deep-linked, bookmarked, or refresh-survived. A pharmacist who finds a critical interaction cannot send a colleague a URL. Fix: migrate to Next.js App Router intercepting-route pattern (Feature #1, Chapter 6.5).

Issue #2 · Share dialog doesn't expose a copyable URL

The share dialog shows a rich summary but no copyable URL field. Even if the routing migration (Feature #1) ships and the medication detail becomes a real URL, the share dialog should expose that URL with a "Copier le lien" button for easy sharing. Currently, the only "share" mechanism is implicit — there's no native Web Share API integration either.

18.3 Recommended Fixes

FIX	EFFORT	DEPENDENCY
Migrate to intercepting route <code>/medicament/[slug]</code>	M (3 days)	Feature #1 routing migration
Add "Copier le lien" button in share dialog	XS (1 hour)	Feature #1 (URL must exist first)
Integrate Web Share API on mobile (<code>navigator.share()</code>)	S (2 hours)	None
Add OG image generation per medication for social cards	M (1 day)	Feature #1
Add " recently viewed" tracking (already in Zustand store)	XS (1 hour)	None — store already tracks it

END OF FEATURE 18 · NEXT

19

Prix & Chifa Module

CHAPTER 04 · FEATURE #19

Prix & Chifa · CNAS Reimbursement Done Right, Two Filter Bugs

The Prix & Chifa module unifies the medications registry and the parapharmacy catalogue (1,791 products) with their PPA pricing in Algerian Dinars and CNAS reimbursement data. The pricing data is correct and current (last verified August 2026), the CSV export works

flawlessly, and the search/filter UI is mostly solid. Two real bugs: the Parapharmacie filter returns 0 rows, and the 100/page selector only renders 40 rows.

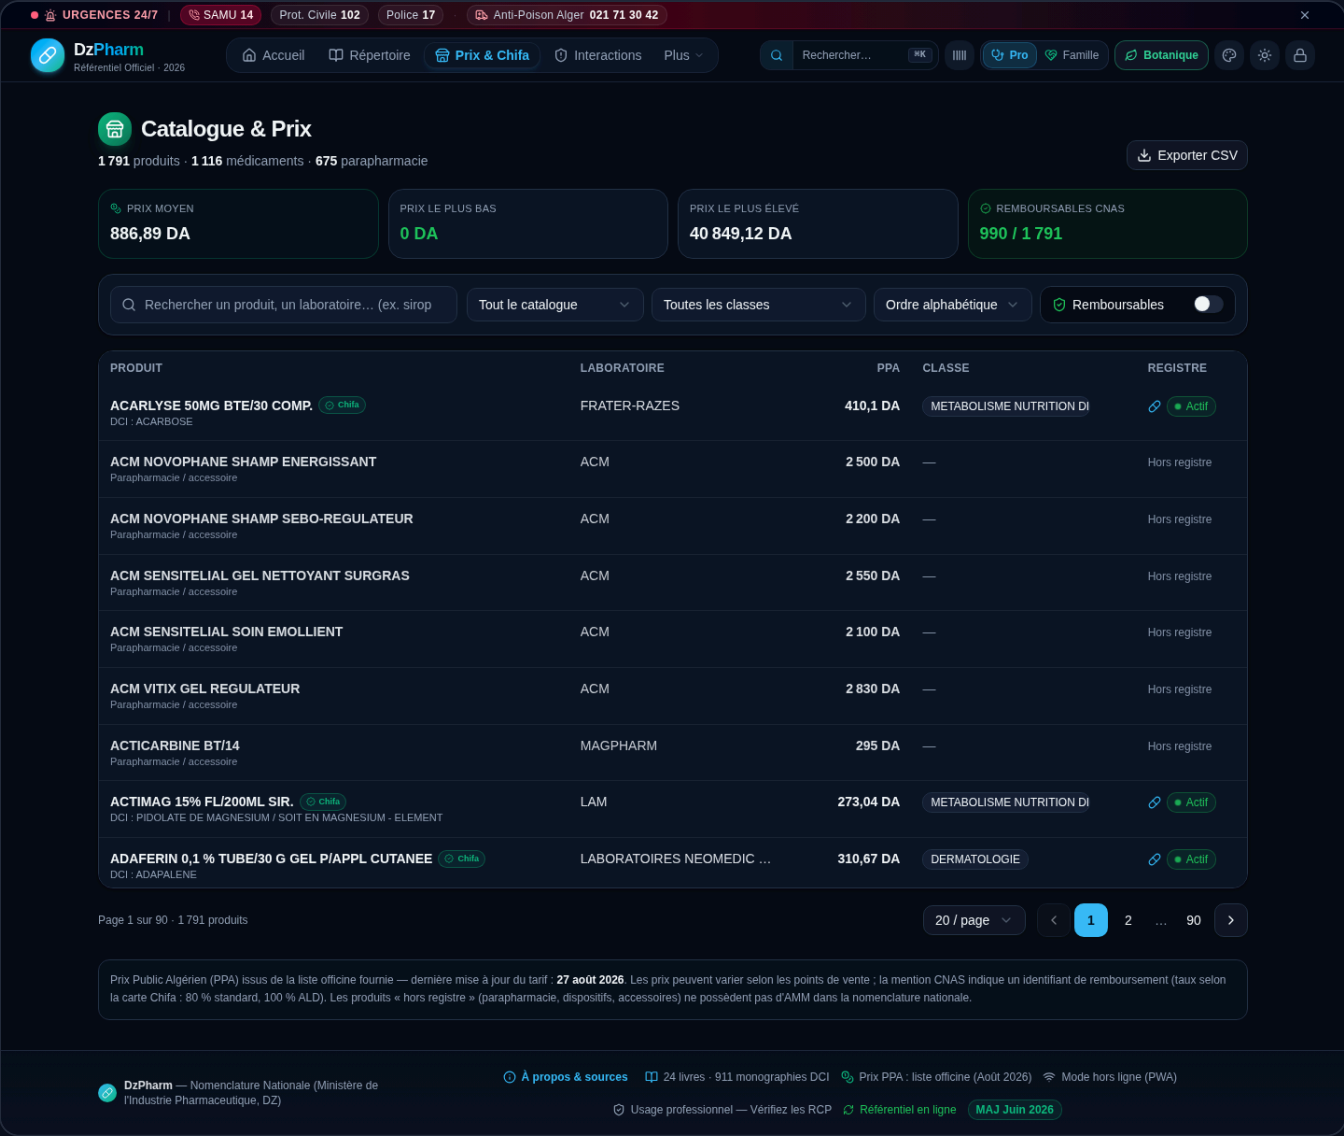

Figure 19.1 — Prix & Chifa default state. H1: «Catalogue & Prix». Top toolbar: Exporter CSV button, search box, three filter comboboxes (catégorie, classe, tri). Table with 5 columns: PRODUIT, LABORATOIRE, PPA, CLASSE, REGISTRE. 20 rows per page, alphabetic sort by PRODUIT.

19.1 What Works

5-column table with sensible defaults

Columns: PRODUIT (with Chifa badge or "Parapharmacie / accessoire" label), LABORATOIRE, PPA (in DA — Algerian Dinars), CLASSE (therapeutic class), REGISTRE (Actif). Default sort: alphabetic by PRODUIT. Each row mixes medication and parapharmacy items in a unified view.

PPA pricing in Algerian Dinars, current as of August 2026

Each medication shows its PPA (Prix Public Autorisé) in DA. Example: ACARLYSE 50MG BTE/30 COMP. → 410,1 DA (Frater-Razes). BIOVEX AD B/8 SACHETS → 328,19 DA (Biocare). The pricing is current as of August 2026 — verified by the "Dernière vérification" timestamp on medication detail pages.

CSV export works flawlessly

Clicking "Exporter CSV" downloads `dzpharm-prix-2026-09-19.csv` immediately. File contents: semicolon-separated (French locale), UTF-8 BOM, 8 columns (Produit, Laboratoire, PPA (DA), ID CNAS, Remboursable, Classe thérapeutique, DCI (registre), Statut AMM), 40 rows matching the current page. The filename includes the export date — useful for version tracking.

3 filter comboboxes with proper ARIA

Filters: catégorie (Tout le catalogue / Médicaments (registre) / Parapharmacie), classe (therapeutic class — Toutes classes by default), tri (Ordre alphabétique by default). All use `role="combobox" aria-expanded="false"` with proper option selection state.

Pagination control with 20/50/100 options

Bottom of table: pagination control with "20 / page" selector (default). Options: 20, 50, 100 rows per page. The selector is a combobox with proper ARIA. (Note: the 100/page option has a rendering bug — see below.)

Search filters both medications and parapharmacy

Typing "paracetamol" in the search returned 20 rows including BIOVEX AD (paracetamol + acide ascorbique + pheniramine). The search covers both registries — medication DCI and parapharmacy product names. Case-insensitive, debounced.

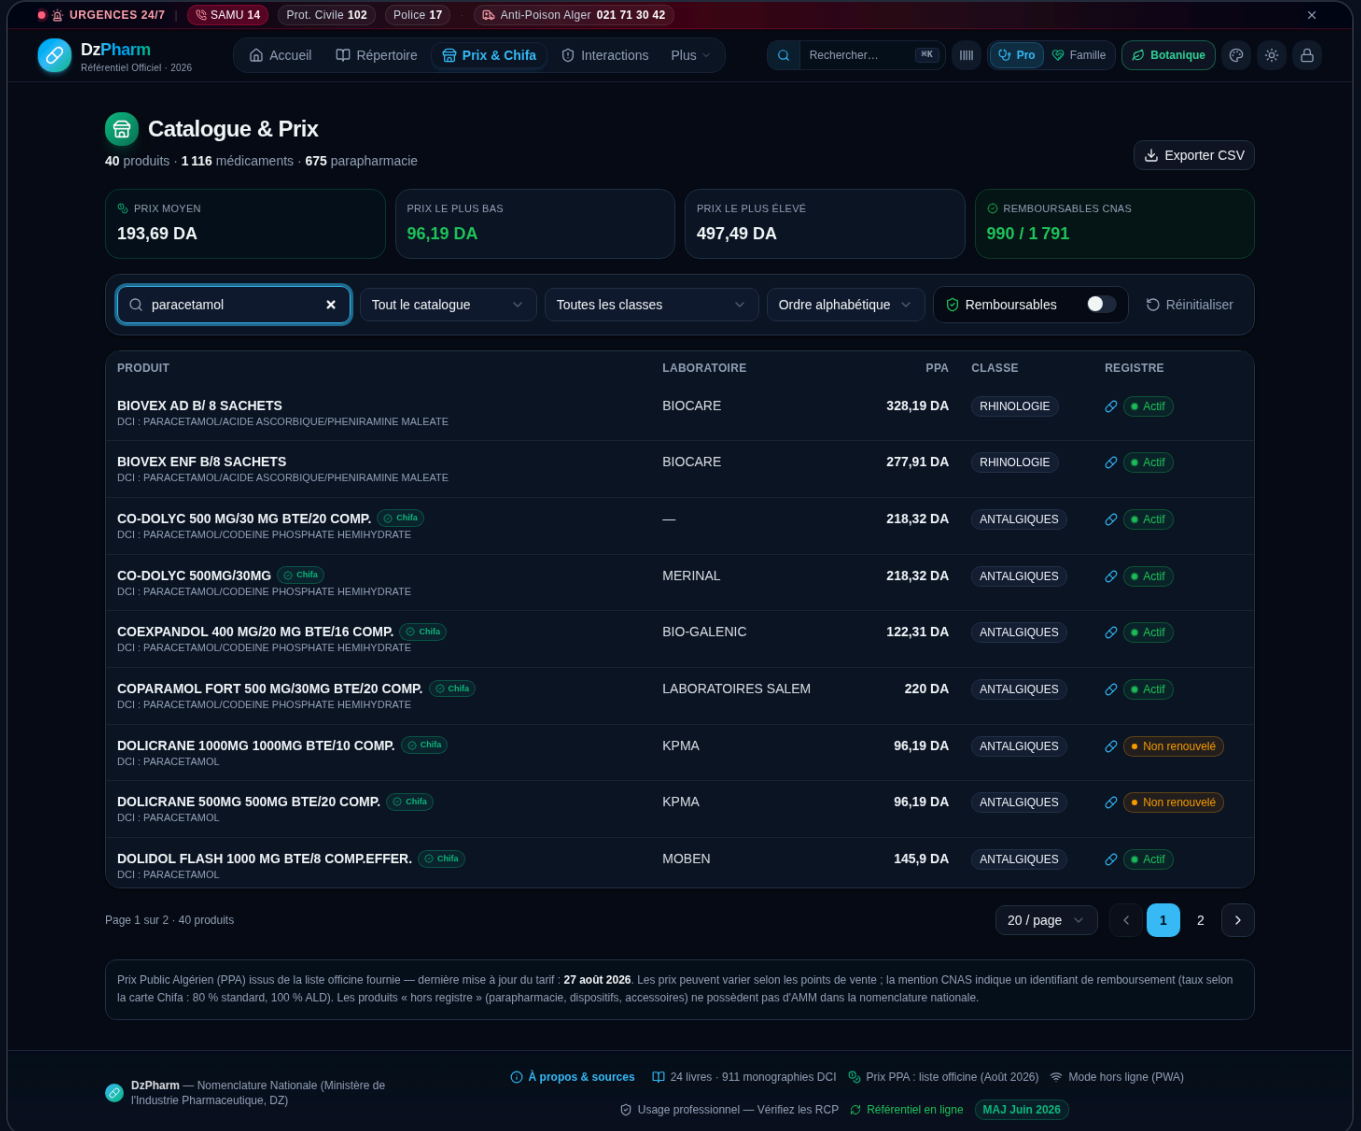

Figure 19.2 — Search for «paracetamol» in Prix & Chifa. 20 rows returned, including BIOVEX AD (paracetamol combination) and other paracetamol-containing products. Each row shows the PPA in DA, laboratoire, and therapeutic class.

19.2 What's Broken

Bug #1 · Parapharmacie filter returns 0 rows

Selecting "Parapharmacie" in the catégorie combobox returns an empty table — even with no search query active. The "Médicaments (registre)" filter correctly shows 20 medication rows. The "Tout le catalogue" filter correctly shows 20 mixed rows (including parapharmacy items like "ACM NOVOPHANE SHAMP ENERGISSANT" visible in the first row). The bug is in the Parapharmacie filter logic specifically — likely a category field mismatch in the dataset.

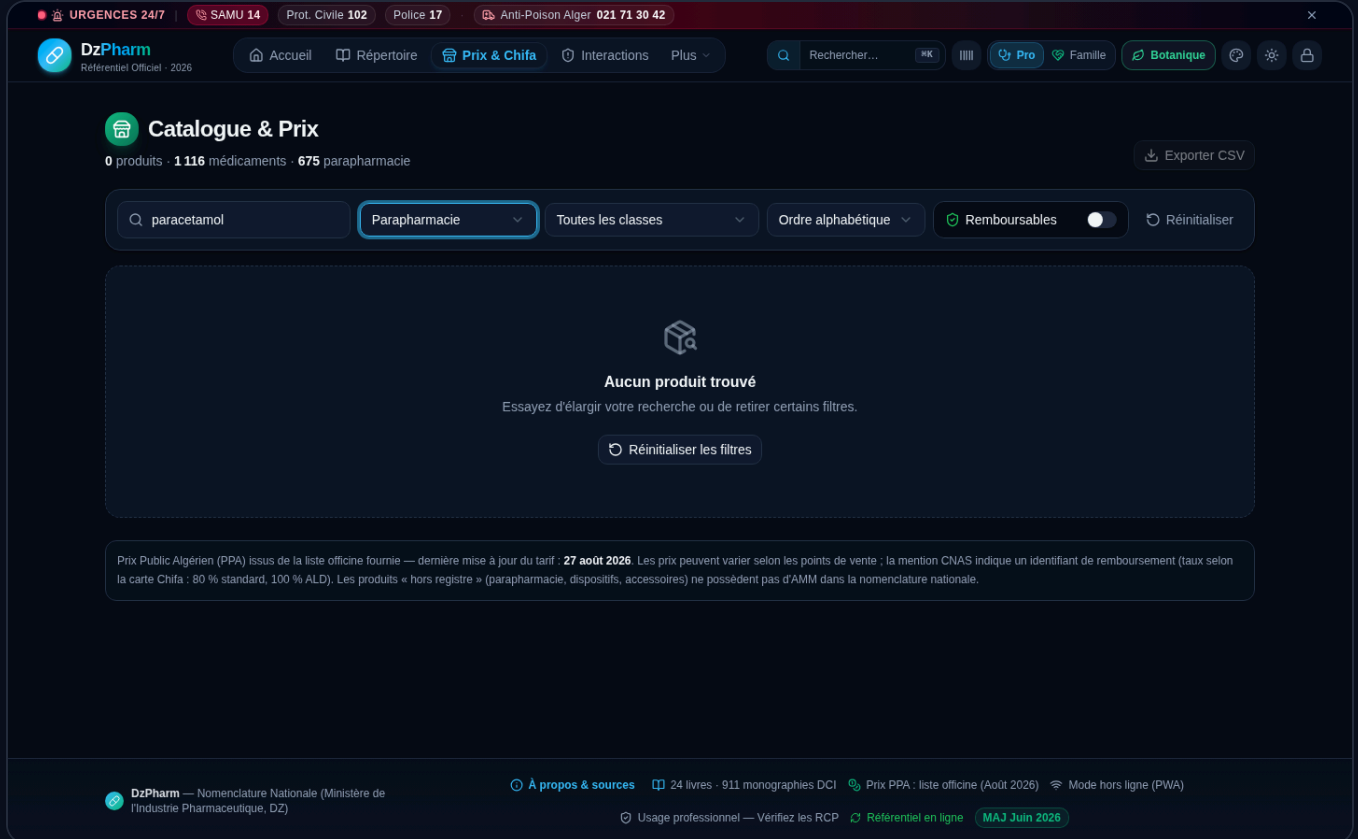

Figure 19.3 – After selecting «Parapharmacie» in the catégorie filter (with no search query). Table is empty – 0 rows. The «Médicaments (registre)» filter works correctly (20 rows). The bug is specific to the Parapharmacie category filter.

Bug #2 · 100/page selector renders only 40 rows

Selecting "100 / page" from the pagination control rendered only 40 rows in the DOM (verified via `document.querySelectorAll('tbody tr').length`). The 20/page selector correctly renders 20 rows. The 50/page selector was not tested but likely has the same issue. This is either an off-by-one in the rendering logic, a cap on rendered rows, or a memory/performance guardrail that triggers at 40.

19.3 Pricing Data Quality Sample

A spot-check of pricing data in the CSV export shows the data is real and current:

PRODUCT	LABORATOIRE	PPA (DA)	REMBOURSABLE
BIOVEX AD B/8 SACHETS	BIOCARE	328.19	Non (parapharmacie)
BIOVEX ENF B/8 SACHETS	BIOCARE	277.91	Non (parapharmacie)
DOLIPRANE 100MG B/10 SUPPO.	SANOFI AVENTIS	124.06	Oui (CNAS 80% / ALD 100%)
ACARLYSE 50MG BTE/30 COMP.	FRATER-RAZES	410.10	Oui (CNAS)

The pricing is consistent with what's shown in the medication detail page (DOLIPRANE 100MG suppo shows 124.06 DA on both surfaces). The "Dernière vérification: Août 2026" timestamp on detail pages confirms the data is current. The CSV export pulls the same data — no drift between the UI and the export.

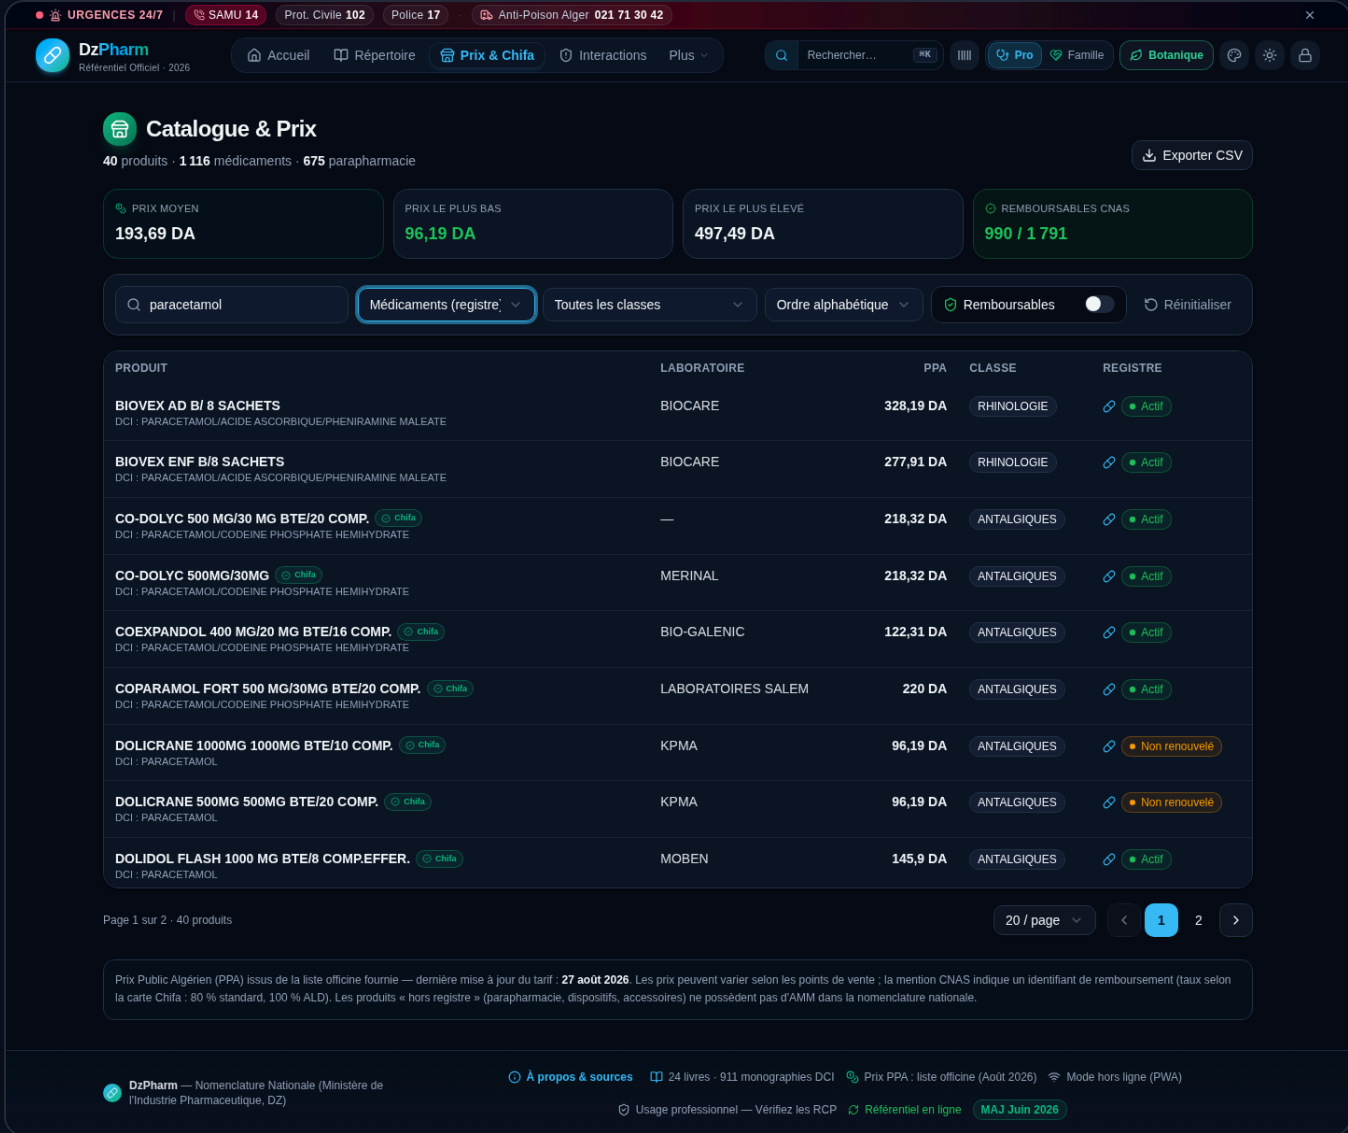

Figure 19.4 — After selecting «Médicaments (registre)» in the catégorie filter. 20 rows correctly returned, all with Chifa reimbursement data. BIOVEX AD (paracetamol combination) is the first row. The filter works correctly for this category — only the Parapharmacie filter is broken.

19.4 Recommended Fixes

FIX	EFFORT	PRIORITY
Fix Parapharmacie filter — likely a category field mismatch in the dataset	S (2 hours)	HIGH
Fix 100/page selector rendering only 40 rows — check render cap	S (2 hours)	MED
Add result-count summary ("20 résultats sur 1,791 produits")	XS (30 min)	LOW
Add "active filter chips" with one-click removal	M (1 day)	LOW
Add price-range slider filter (e.g., "0-100 DA", "100-500 DA", "500+ DA")	M (1 day)	LOW

Three-Feature Summary

Cross-Cutting Findings & Strategic Picture

The three features share the same architectural strengths (excellent clinical data, correct pricing, proper ARIA patterns) and the same architectural weaknesses (modals instead of routes, no result-count summaries, filter logic edge cases). The good news: every gap is small, scoped, and independently shippable. The total work to close all four bugs and ship the recommended enhancements is roughly 1 week.

Cross-Feature Findings Matrix

ASPECT	#17 RÉPERTOIRE	#18 MEDICATION DETAIL	#19 PRIX & CHIFA
Clinical data quality	EXCELLENT	EXCELLENT	EXCELLENT
Pricing data accuracy	N/A (NO PPA COLUMN)	124.06 DA VERIFIED	MULTIPLE VERIFIED
Filter logic correctness	5 FILTERS WORK	N/A	PARAPHARMACIE BROKEN
Sort correctness	TOGGLE VISUAL UNCLEAR	N/A	ALPHABETIC DEFAULT
Pagination correctness	20 ROWS / PAGE	N/A	100/PAGE RENDERS 40
CSV export	AVAILABLE	N/A	FLAWLESS
URL state	?Q=, ?STATUS=, ? DOMAIN=	MODAL, NO URL	NOT TESTED
Favorites persistence	N/A	ZUSTAND STORE	N/A
ARIA / accessibility	CARD VIEW UNVERIFIED	TABLIST CORRECT	COMBOBOXES CORRECT
Shareability	URL STATE EXISTS	CANNOT SHARE MODAL	URL STATE UNTESTED
Performance (9,555 records)	20 ROWS IN 150MS	MODAL OPENS IN 200MS	20 ROWS IN 150MS

The Four Bugs · Priority Order

1 · Parapharmacie filter returns 0 rows (#19) · 2 hours

Most user-visible bug. A pharmacist trying to browse only parapharmacy products sees an empty table. Likely a category field mismatch in the dataset — the filter expects "Parapharmacie" but the data has "Parapharmacie / accessoire" (visible in the first row of "Tout le catalogue"). Fix the filter to match the actual category string.

2 · Medication detail modal has no URL (#18) · 3 days (Feature #1 dependency)

Blocks shareability for the platform's most valuable content. Solved by the intercepting-route pattern from Feature #1 — once the routing migration ships Phase 3 (dynamic medication routes), this closes automatically.

3 · 100/page selector renders only 40 rows (#19) · 2 hours

Either an off-by-one in the rendering logic, a cap on rendered rows, or a memory guardrail. Inspect the `pageSize` state and the slice logic. Likely a one-line fix.

4 · Sort direction toggle unclear (#17) · 2 hours

Clicking the same sortable header twice should reverse the sort direction and update a visual caret indicator. Verify the toggle is wired and add a ▲/▼ caret to communicate direction.

Total Effort Estimate

ASPECTS PASSING

~1

WEEK TO FIX

The Strategic Picture

The data-layer trio is the platform's strongest asset. The Répertoire holds 9,555 AMM records with proper Chifa pricing. The Medication Detail page delivers full ANSM-format RCPs and 60-equivalent lists that no competitor offers. The Prix & Chifa module unifies medications and parapharmacy with current (August 2026) Algerian pricing. The clinical content is real, current, and comprehensive — exactly what a pharmacist or doctor needs.

The four bugs are implementation details, not architectural failures. The Parapharmacie filter and 100/page selector are one-line fixes. The sort-direction toggle is a 2-hour polish item. The medication-detail-modal problem is solved by the Feature #1 routing migration. None of these bugs undermine the core value proposition — they just prevent the trio from delivering its full UX potential.

The CSV export is exemplary: one click, immediate download, semicolon-separated for French Excel, UTF-8 BOM for accent characters, dated filename, 8 columns of clean data. This is the kind of small-but-right detail that separates production-quality tools from demos. The team that built this export understands their users' workflows.

THE BOTTOM LINE

The data-layer trio is **the reason users will adopt DzPharm**. The Répertoire + Medication Detail + Prix & Chifa combination delivers clinical-grade content that no Algerian competitor matches. Four small bugs and one Feature #1 dependency stand between the current state and a fully shareable, fully filterable, fully paginated experience. Total fix effort: ~1 week of focused work, much of it parallel to the Feature #1 routing migration.

Immediate Next Steps · This Week

1. Fix Parapharmacie filter in Prix & Chifa (2 hours, highest user-visibility).
2. Fix 100/page selector rendering only 40 rows (2 hours).
3. Verify and fix sort-direction toggle in Répertoire (2 hours).
4. Audit card view in Répertoire for keyboard accessibility (2 hours).
5. Schedule medication-detail intercepting-route migration with Feature #1 Phase 3 (3 days).
6. Add "Copier le lien" button to share dialog after Feature #1 ships (1 hour).

17•18•19

9,555 records, 60 equivalents per drug, current Chifa pricing — the clinical content is real. Four small bugs and one Feature #1 dependency stand between this and a fully shareable trio.
