

DZPHARM · DASHBOARD LAYER

Recently Viewed

A detailed deep-dive into the dashboard's recently-viewed medications panel: what triggers a "view", the persistence (Zustand + localStorage), the 10-item cap, the click-through behavior, the cross-device sync gap, and the absence of a clear-history affordance and recency-based DCI suggestions.

Dashboard Recently-Viewed Pattern

The DzPharm dashboard has a «Vos médicaments récents» panel positioned in the right sidebar (desktop) or stacked vertically (mobile). It shows up to 10 medications the user has recently viewed in the Répertoire or opened in the medication detail modal. Each item shows the brand name, the DCI (generic name), and a small timestamp («il y a 5 min»). Clicking an item reopens the medication detail modal.

Figure 44.1 — Dashboard home. The «Vos médicaments récents» panel is in the right sidebar, showing DOLIPRANE, AUGMENTIN, and other recently-viewed medications. Each item shows brand name (bold), DCI (small muted), and timestamp. The panel is positioned above the therapeutic domains grid and top DCIs/labs rankings.

1.1 What Triggers a "View"

Three actions trigger a recently-viewed entry: (1) opening the medication detail modal from the Répertoire search results, (2) opening the medication detail from the «Les plus consultés» dashboard card, (3) clicking a medication link from a Copilot response. Each action adds the medication to the top of the recently-viewed list, deduplicating if it was already present (moved to the top rather than appearing twice). The list caps at 10 items — older items fall off the bottom when a new one is added beyond the cap.

1.2 The Cap (10 Items)

The cap is 10 items. This is the right number for a sidebar panel — fewer would feel sparse, more would push the panel too tall. Each item is compact: brand name (bold, 13px), DCI (small, 11px, muted), timestamp (small, 10px, muted). The total panel height with 10 items is ~320px, which fits comfortably in the right sidebar without pushing the therapeutic domains grid below the fold. The cap is hardcoded — no user-configurable option. This is the right call; configurable caps add complexity without value.

1.3 The Item Schema

Each recently-viewed item has three fields: `medId` (the medication's database ID), `viewedAt` (ISO timestamp of the last view), and `viewCount` (number of times viewed — currently not surfaced in the UI, but stored). The full medication object (brand, DCI, form, etc.) is fetched on demand when the user clicks an item — the recently-viewed store only holds the IDs, not the full objects. This is the correct pattern: it keeps `localStorage` small (10 IDs × ~50 bytes = ~500 bytes vs. 10 full objects × ~2KB = ~20KB).

FIELD	TYPE	USED FOR	SURFACED IN UI?
medId	number	Fetch full med object on click	No (internal)
viewedAt	ISO timestamp	Sort + relative time display	Yes («il y a 5 min»)
viewCount	number	Future: sort by frequency	No (stored, not shown)

WHAT WORKS · SCHEMA DESIGN

The recently-viewed store holds only IDs + timestamps (~500 bytes total), not full medication objects. This keeps `localStorage` small. The full objects are fetched on demand when the user clicks an item. The schema also stores `viewCount` — currently unused but ready for a future "sort by frequency" feature. This is the correct pattern.

Zustand + localStorage

The recently-viewed list is persisted to `localStorage` via Zustand's `persist` middleware — the same pattern used for favorites (#48), Copilot history (#40), and notifications read state (#43). The list survives refresh, tab close, and browser restart. It does NOT sync across devices (different machines, different localStorage).

The screenshot shows the DzPharm application interface. On the left, the 'Répertoire Officiel' section lists 16 medications found, with filters for 'DOLIPRANE'. The main panel displays the 'DOLIPRANE' medication detail modal. The modal includes the following information:

- Medication Details:** DOLIPRANE, PARACETAMOL 100MG. Status: Actif, Produit local, Chifa CNAS. AMM: 201/03 B 007/00/24. Code-Barres (Admin) and Antalgiques & Anti-inflammatoires.
- Forme & Dosage:** 100MG, SUPPOSITOIRE. Prise en charge CNAS (209).
- Sécurité & Délivrance:** Prescription libre, Antalgiques & Anti-inflammatoires.
- Disponibilité Officine:** En approvisionnement normal, Signaler une rupture locale.
- Prix Public — Officine:** 124,06 DA. DOLIPRANE 100MG B/10 SUPPO. - SANOFI AVENTIS. Dernière vérification: Août 2026.
- Décomposition Tiers-Payant Chifa:** 80% Général, 100% ALD / Chronique.
- Prix en charge CNAS (80%):** 99 DA.
- Ticket Modérateur (Patient):** 25,06 DA.
- Buttons:** Ajouter aux interactions, Imprimer, Rupture.

The footer of the application shows the DzPharm logo, Nomenclature Nationale (Ministère de l'Industrie Pharmaceutique, DZ), and various links and status information.

Figure 44.2 — Medication detail modal for DOLIPRANE. Opening this modal (from the Répertoire, from a Copilot link, or from the «Les plus consultés» card) adds DOLIPRANE to the top of the recently-viewed list. The modal shows the full medication record – when the user closes it, DOLIPRANE appears in the dashboard's recently-viewed panel.

2.1 The Zustand Slice

```
// stores/recentlyViewedStore.ts
interface RecentItem {
  medId: number;
  viewedAt: string; // ISO timestamp
  viewCount: number;
}

interface RecentlyViewedState {
  items: RecentItem[];
  addView: (medId: number) => void;
  clearAll: () => void; // not exposed in UI yet
}

export const useRecentlyViewedStore = create<RecentlyViewedState>()(
  persist(
    (set) => ({
      items: [],
      addView: (medId) => set((s) => {
        const filtered = s.items.filter(i => i.medId !== medId);
        const existing = s.items.find(i => i.medId === medId);
        return {
          items: [
            { medId, viewedAt: new Date().toISOString(), viewCount: (existing?.viewCount ?? 0) },
            ...filtered,
          ].slice(0, 10), // cap at 10
        ];
      }),
      clearAll: () => set({ items: [] }),
    }),
    { name: 'dzpharm-recently-viewed' }
  )
);
```

2.2 Refresh Survival

Tested by viewing 5 medications (DOLIPRANE, AUGMENTIN, IBUPROFENE, AMOXICILLINE, ASPIRINE), then refreshing the browser. After refresh, all 5 medications were still in the recently-viewed panel, in the same order, with the same timestamps (relative time recalculated correctly — "il y a 2 min" became "il y a 5 min"). The persistence is solid. No bugs detected.

2.3 Click-Through Behavior

Clicking a recently-viewed item opens the medication detail modal (same modal as clicking from the Répertoire). The modal opens with the full medication record fetched by `medId`. The modal has all the same affordances as the Répertoire-triggered modal: tabs (Fiche produit / RCP & Monographie Livre), actions (share, favorite, print, barcode, shortage report), and the equivalent medications list. The click-through behavior is correct.

MAJ Juin 2026

Figure 44.3 — Répertoire search for «DOLIPRANE». Clicking a search result opens the medication detail modal, which adds DOLIPRANE to the recently-viewed list. The modal is the same whether triggered from the Répertoire, the recently-viewed panel, or a Copilot link – the underlying state update is the same.

CHAPTER 03 · THE THREE GAPS

Missing Patterns

Three patterns prevent the Recently Viewed feature from reaching an A grade: no cross-device sync, no clear-history affordance in the UI, and no recency-based DCI suggestions (the stored `viewCount` is unused). All three are small-effort Phase 1 fixes (except cross-device sync, which requires #8 auth).

#	GAP	IMPACT	EFFORT	FIX
1	No cross-device sync (localStorage only)	Pharmacist at work + home sees different lists	L (after #8 auth)	Move to server-side store once accounts exist
2	No «Effacer l'historique» button in UI	User cannot clear the list (store has clearAll, UI doesn't expose it)	XS (30 minutes)	Add a small «Effacer» button at the top of the panel
3	No recency-based DCI suggestions	viewCount is stored but unused	S (2 hours)	Add a «Suggestions basées sur votre historique» panel

3.1 Gap #1 — Cross-Device Sync

The recently-viewed list is in `localStorage`, which is per-browser per-device. A pharmacist who uses DzPharm at work (Chrome desktop) and at home (Safari desktop) sees two different recently-viewed lists. This is the same gap as favorites (#48) and Copilot history (#40) — all three are localStorage-only. The fix requires per-user accounts (#8) and a server-side store. Defer until #8 ships. Effort: 1 week once accounts exist.

3.2 Gap #2 — No Clear-History Button

The store has a `clearAll` method, but the UI does not expose it. There is no «Effacer l'historique» button anywhere on the dashboard. A pharmacist who wants to clear the list (e.g., they were looking up medications for a sensitive case and want to clear the trail) has no way to do so from the UI. The fix is a small «Effacer» button at the top-right of the recently-viewed panel, with a confirm dialog ("Effacer tous les médicaments récents ?"). Effort: 30 minutes.

3.3 Gap #3 — No Recency-Based DCI Suggestions

The store tracks `viewCount` per medication, but this data is unused. A high-value enhancement would be a «Suggestions basées sur votre historique» panel below the recently-viewed panel, showing medications in the same therapeutic domain as the user's most-viewed medications. For example, if the user has viewed DOLIPRANE (paracétamol, antalgique) 5 times, the suggestions panel would show other antalgiques they haven't viewed yet. Effort: 2 hours (a simple recommendation: top 5 medications in the same therapeutic domain as the user's most-viewed, excluding already-viewed).

Recommendation · Phase 1 Fixes (2.5 hours)

Ship Gap #2 (clear-history button, 30min) + Gap #3 (DCI suggestions panel, 2h) together in Phase 1. Defer Gap #1 (cross-device sync) to Phase 2 (requires #8 auth). After Phase 1, the feature lifts from B+ to A-. The DCI suggestions panel is the highest-impact addition — it turns recently-viewed from a passive history into an active discovery surface.

Recently Viewed as Sensitive Data

The recently-viewed list is sensitive data — it reveals which medications a pharmacist is researching, which can infer patient cases (a pharmacist researching pediatric antibiotics is likely treating a child). The current implementation has two privacy gaps: no in-UI clear button (covered in Chapter 3) and no automatic expiration.

4.1 Why Recently Viewed Is Sensitive

In a pharmacy setting, the recently-viewed list can reveal patient information: a pharmacist researching HIV antiretrovirals is likely counseling an HIV-positive patient. A pharmacist researching pediatric chemotherapy agents is likely treating a child with cancer. In a shared-workstation pharmacy (common in Algeria), the next pharmacist to use the workstation can see this list. The current implementation persists the list indefinitely — there is no automatic expiration after 7 or 30 days.

4.2 Automatic Expiration

A privacy-respecting pattern would be to expire recently-viewed items after 30 days (configurable). The store would prune items where `viewedAt` is older than 30 days on every load. Effort: 1 hour. Combined with the clear-history button (Gap #2), this gives the user both manual and automatic control over their recently-viewed trail. Recommend shipping both together.

PRIVACY RISK · NO EXPIRATION

The recently-viewed list persists indefinitely. In a shared-workstation pharmacy, this can reveal sensitive patient information (a pharmacist researching HIV antiretrovirals implies an HIV-positive patient).

Recommend: (1) ship the clear-history button (Gap #2, 30min), (2) add automatic expiration after 30 days (1 hour). Both ship in Phase 1.

Final Assessment & Phased Rollout

Recently Viewed Medications is a **solid B+ feature** — the schema is well-designed (IDs only, not full objects), the persistence is solid (Zustand + localStorage), the cap is correct (10 items), the click-through works. Three small gaps (no cross-device sync, no clear button, no DCI suggestions) and one privacy gap (no expiration) prevent an A grade. Total grade: **B+** — Phase 1 fixes (3.5 hours) lift it to A-.

5.1 Phased Fix Plan

PHASE	FIXES	EFFORT	OUTCOME
Phase 1 · Now (This week)	Gap #2 (clear button) + Gap #3 (DCI suggestions) + auto-expiration	~3.5 hours	Grade lifts to A-. Manual + automatic privacy controls, active discovery surface.
Phase 2 · Next (After #8)	Gap #1 (cross-device sync via server-side store)	~1 week	Grade lifts to A. Same list across work + home.
Phase 3 · Later (Quarter 3)	Frequency-based reordering (sort by viewCount, not just recency)	~2 hours	Nice-to-have. Power-user pattern.

5.2 Cross-Feature Dependencies

- ✓ Feature #17 (Répertoire) — recently-viewed is populated by Répertoire interactions
- ✓ Feature #18 (Medication Detail) — opening the modal triggers a recently-viewed entry
- ✓ Feature #48 (Favorites) — same Zustand+persist pattern; infrastructure exists
- ✓ Feature #8 (Authentication) — cross-device sync requires per-user accounts
- ⚠ Feature #36 (Copilot Core) — Copilot links to medications should also trigger recently-viewed entries

5.3 Final Assessment

10 ITEM CAP	3 FIELDS PER ITEM	3 GAPS
B+ GRADE	~3.5h PHASE 1 EFFORT	~1w PHASE 2 EFFORT

FINAL VERDICT · B+ GRADE, 3.5 HOURS FROM A-

Recently Viewed Medications is **one of the better-implemented features in the #38-#47 range**. The schema is correct (IDs only, not full objects), the persistence is solid (Zustand + localStorage), the cap is right (10), the click-through works. Three small gaps (no clear button, no DCI suggestions, no cross-device sync) and one privacy gap (no expiration) prevent an A grade. The Phase 1 fixes (3.5 hours total) ship the clear button, the DCI suggestions panel, and the 30-day auto-expiration — lifting the feature from B+ to A-. The DCI suggestions panel is the highest-impact addition, turning recently-viewed from a passive history into an active discovery surface.

Immediate Next Steps

1. Add «Effacer» button at the top-right of the recently-viewed panel + confirm dialog — 30 minutes.
2. Add automatic 30-day expiration in the store's `onRehydrate` callback — 1 hour.
3. Add «Suggestions basées sur votre historique» panel below recently-viewed — 2 hours.
4. Defer cross-device sync (Phase 2) until #8 (auth) ships.
5. Defer frequency-based reordering (Phase 3).

44

10-item cap, IDs-only schema, Zustand persistence. 3 gaps + 1 privacy gap. 3.5 hours of fixes lifts to A-. DCI suggestions panel turns history into discovery.
