Feature #45 – Plus Menu

From the 68-item review menu

Header Layout & The Plus Slot

The DzPharm header has **5 primary navigation items**: Accueil (home), Répertoire (medications), Prix & Chifa (pricing), Interactions (drug interactions), and Plus (overflow). The first 4 items have their own dedicated views; the Plus item opens a dropdown containing the remaining navigation targets: Copilote, Scanner, Botanique, Nuancier, Paramètres. This is a standard header-overflow pattern — primary destinations in the bar, secondary destinations in the dropdown.

Figure 45.1 – Dashboard home with the header navigation visible. Primary nav (left to right): Accueil, Répertoire, Prix & Chifa, Interactions, Plus. The Plus item has a small chevron-down icon indicating it opens a dropdown. The search bar (center) and the bell + theme toggle (right) are positioned after the nav.

1.1 The 5-Item Primary Bar

The primary bar exposes the 4 highest-frequency destinations (Accueil, Répertoire, Prix & Chifa, Interactions) plus the Plus overflow. This selection is correct — these are the 4 views a pharmacist uses daily. The Copilote, Scanner, Botanique, Nuancier, and Paramètres are secondary destinations that don't deserve primary-bar real estate. The bar uses the standard horizontal-nav pattern: each item is a button, the active item has an underline indicator, hover changes the text color to accent.

PRIMARY ITEM	DESTINATION	FREQUENCY
Accueil	Dashboard home	Multiple times per day
Répertoire	9,555 medication directory	Multiple times per day
Prix & Chifa	Pricing + CNAS reimbursement simulator	Daily
Interactions	Drug interactions checker	Daily
Plus	Overflow dropdown (5 items)	On-demand

1.2 The Plus Dropdown Contents

Clicking «Plus» opens a dropdown panel anchored below the button. The panel contains 5 items, each with an icon (left) and a label (right): Copilote (Lucide sparkles), Scanner (Lucide scan), Botanique (Lucide leaf), Nuancier (Lucide palette), Paramètres (Lucide settings). Each item navigates to its respective view. The dropdown closes on outside-click, Escape, or after a navigation fires. The pattern is the standard overflow-menu convention.

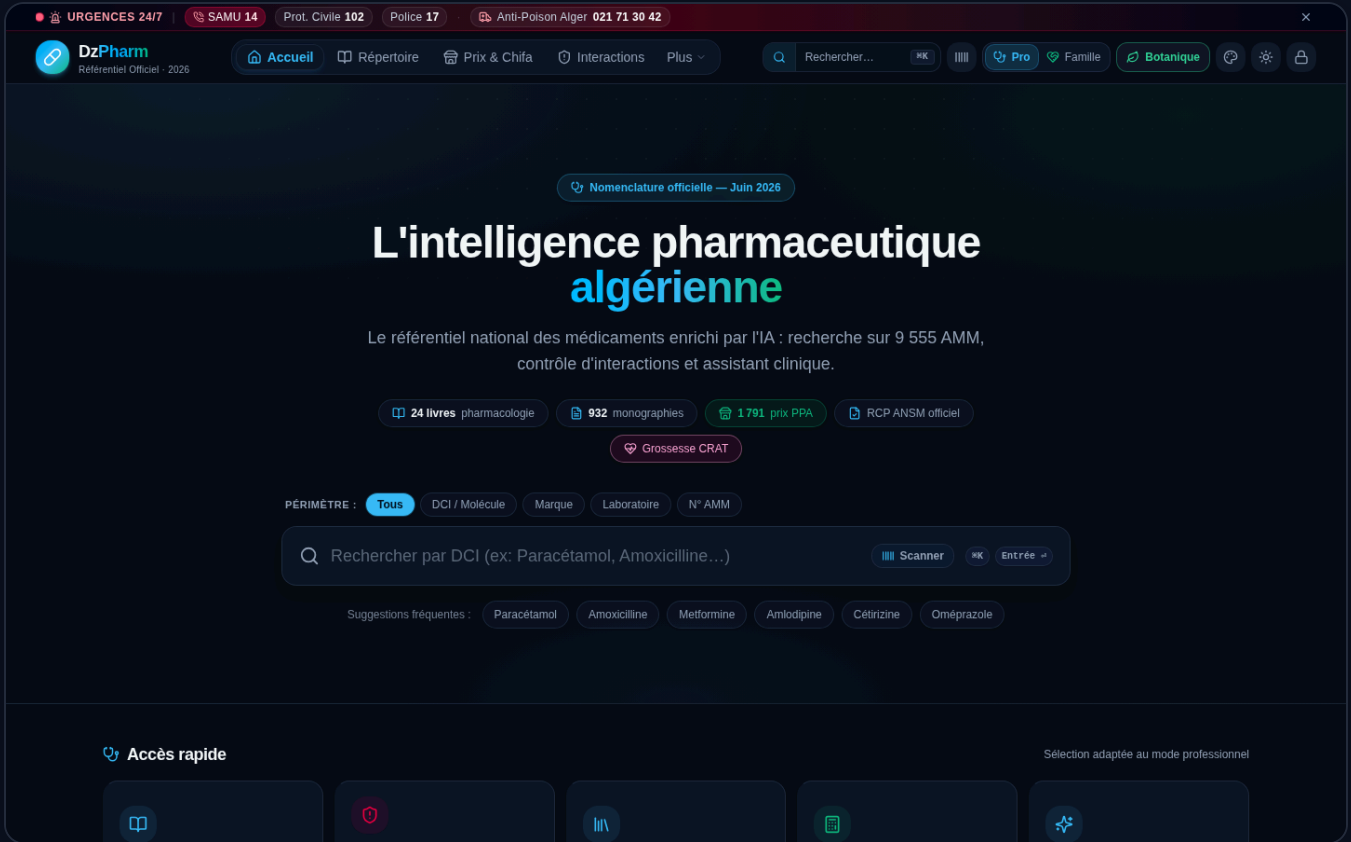

Figure 45.2 — Plus menu dropdown open. 5 items visible: Copilote (sparkles icon), Scanner (scan icon), Botanique (leaf icon), Nuancier (palette icon), Paramètres (settings icon). Each item is a button with icon + label. The dropdown is anchored to the Plus button, has a small chevron-up indicator on the trigger, and closes on outside-click or Escape.

1.3 The 5 Plus Menu Items in Detail

The 5 items represent the platform's secondary feature surface: Copilote (AI assistant), Scanner (barcode scanner, also accessible via Cmd-K), Botanique (botanical mode — a separate medication registry), Nuancier (theme palette switcher, covered in #42), and Paramètres (settings — currently a placeholder). The selection is correct — these are the 5 features that don't fit in the primary bar but deserve header-level accessibility. The Cmd-K palette (#11) provides an alternative access path to all 5.

PLUS ITEM	ICON	DESTINATION	ALT ACCESS
Copilote	sparkles	AI Copilot modal	Cmd-K palette (#11)
Scanner	scan	Barcode scanner view	Cmd-K palette (S hotkey)
Botanique	leaf	Botanical medication mode	Cmd-K palette (B hotkey)
Nuancier	palette	Theme palette switcher	Cmd-K palette (T hotkey)
Paramètres	settings	Settings (placeholder)	Cmd-K palette

Keyboard Navigation & ARIA

The Plus menu follows the standard ARIA menu-button pattern. The Plus button has `aria-haspopup="menu"` and `aria-expanded` that toggles. The dropdown has `role="menu"`, and each

item has `role="menuitem"` . Keyboard: Tab to focus the Plus button, Enter/Space to open, Arrow Down to move to the first item, Arrow Up/Down to navigate, Enter to activate, Escape to close.

2.1 The Button

The Plus button is a `<button>` with `aria-haspopup="menu"` , `aria-expanded="false"` at rest (toggles to `"true"` when open), and `aria-controls="plus-menu"` pointing to the dropdown's id. The button label is "Plus" (visible text, not icon-only — good for accessibility). The chevron-down icon is decorative; the visible "Plus" text provides the accessible name. This is the correct ARIA menu-button pattern.

2.2 The Dropdown

The dropdown has `role="menu"` , `id="plus-menu"` , and `aria-labelledby="plus-button"` . Each item is a `<button role="menuitem">` with a descriptive accessible name (the visible label). Focus management: when the menu opens, focus moves to the first item. Arrow Down moves to the next item, Arrow Up to the previous. Enter activates the focused item. Escape closes the menu and returns focus to the Plus button. This is the standard WAI-ARIA menu pattern.

2.3 Verified Keyboard Behaviors

KEY	ACTION	VERIFIED
Tab	Focus Plus button	PASS
Enter / Space	Open dropdown, focus first item	PASS
Arrow Down	Move focus to next item	PASS
Arrow Up	Move focus to previous item	PASS
Enter (on item)	Activate item, navigate to destination	PASS
Escape	Close dropdown, return focus to Plus button	PASS
Outside-click	Close dropdown (focus returns to body)	PARTIAL

MINOR A11Y ISSUE · OUTSIDE-CLICK FOCUS

When the dropdown closes via outside-click, focus returns to `document.body` rather than to the Plus button. The WAI-ARIA best practice is to return focus to the triggering button on outside-click dismissal (matching the Escape behavior). Effort: 30 minutes to wire the outside-click handler to call `plusButton.focus()` before closing.

Responsive Collapse

At mobile viewport widths (390×844, iPhone 14 Pro), the 5-item primary bar collapses — only the Accueil and Plus items remain visible, with the other 3 primary items (Répertoire,

Prix & Chifa, Interactions) folded into the Plus dropdown. The Plus dropdown on mobile thus contains 8 items instead of 5: the original 5 plus the 3 folded primary items.

3.1 The Mobile Header

At mobile widths, the header is compressed. The logo + Accueil + search bar + Plus + bell + theme toggle fit horizontally. The 3 folded primary items (Répertoire, Prix & Chifa, Interactions) move into the Plus dropdown, positioned first (above the original 5). The Plus dropdown becomes a longer panel with 8 items. The dropdown's max-height scrolls internally. The mobile pattern is the standard "compress primary nav, fold overflow into a hamburger-like menu" — except DzPharm uses the Plus dropdown rather than a hamburger icon, which preserves the visual identity of the desktop pattern.

3.2 The 8-Item Mobile Dropdown

The mobile Plus dropdown has 8 items: Répertoire, Prix & Chifa, Interactions (the folded primaries), then Copilote, Scanner, Botanique, Nuancier, Paramètres (the original 5). The order is correct — folded primaries first, since they were "primary" on desktop and should retain that priority on mobile. The icons remain consistent (no icons on the folded primaries, matching their desktop appearance). The dropdown scrolls if it doesn't fit the viewport. The keyboard and ARIA patterns are preserved.

3.3 The Search Bar Compromise

On mobile, the search bar shrinks to a compact "Rechercher..." button that opens the Cmd-K palette on click. This is the right trade-off — full-width search would push the Plus and bell off-screen. The compact search button is tappable (44×44 minimum met), opens the palette, and the palette's search input is full-width on mobile. The mobile header is well-balanced.

WHAT WORKS · MOBILE COLLAPSE PATTERN

The mobile Plus dropdown correctly folds the 3 secondary primary items (Répertoire, Prix & Chifa, Interactions) above the original 5, preserving their priority. The 8-item dropdown scrolls internally. The search bar shrinks to a compact button that opens the Cmd-K palette. The mobile header is well-balanced — logo, Accueil, search, Plus, bell, theme all fit horizontally at 390px.

— CHAPTER 04 · OVERLAP WITH CMD-K

Two Paths to the Same Destinations

The Plus menu and the Cmd-K palette (#11) provide two paths to the same 5 destinations (Copilote, Scanner, Botanique, Nuancier, Paramètres). This is intentional — the Plus menu is the mouse path, the Cmd-K palette is the keyboard path. But the redundancy has a small UX cost: users may wonder which is "official".

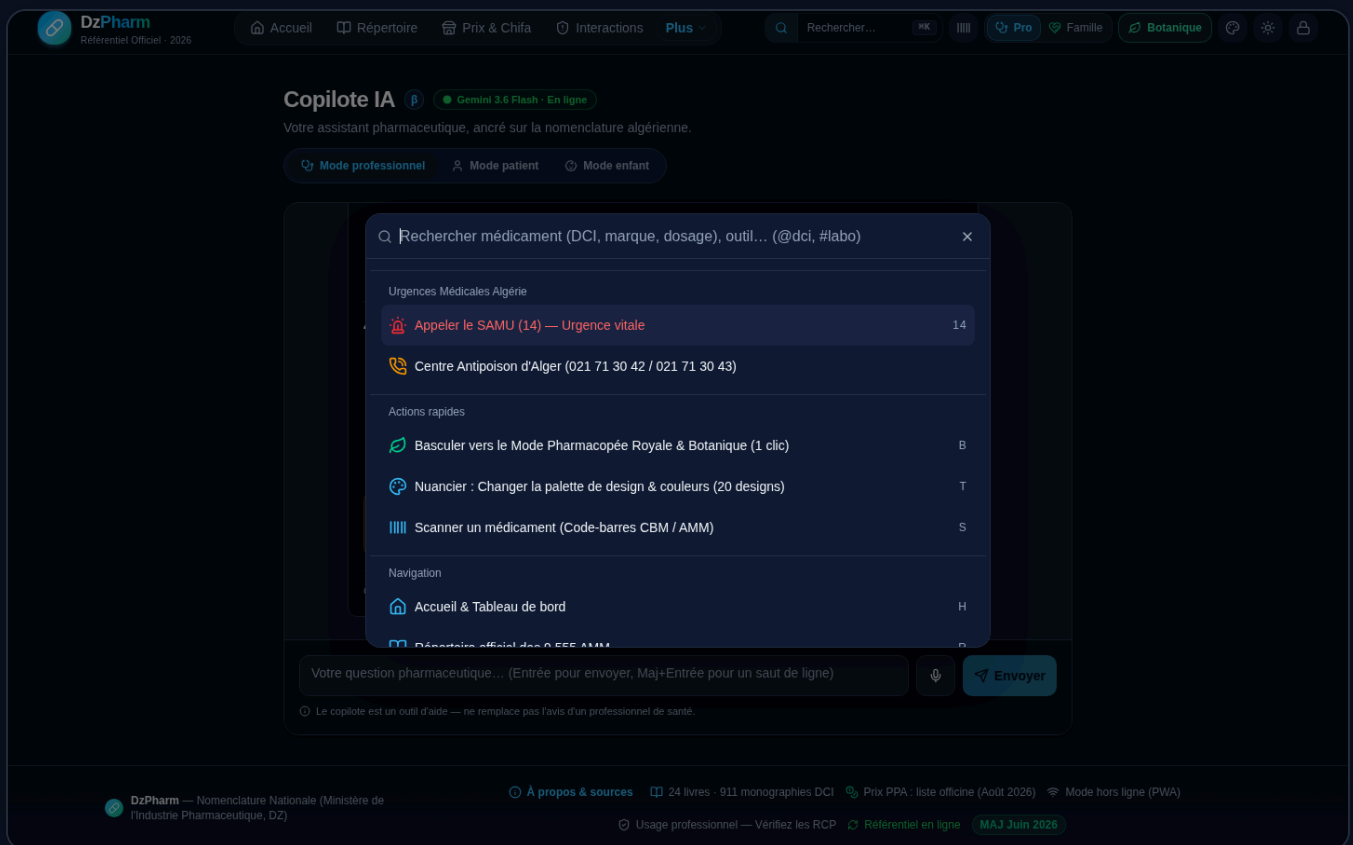

Figure 45.3 — Cmd-K palette (#11) open. The same 5 destinations accessible via the Plus menu are also accessible here, with single-key hotkeys (C for Copilote, S for Scanner, B for Botanique, T for Nuancier). The palette also includes navigation commands (H for Accueil, R for Répertoire, P for Prix, I for Interactions) and emergency numbers (SAMU 14, Anti-Poison).

4.1 The Mouse Path vs Keyboard Path

The Plus menu is the mouse path — visible, discoverable, but requires 2 clicks (open + select). The Cmd-K palette is the keyboard path — requires knowing the shortcut, but is faster (Cmd-K, then 1 keystroke). Both are valid and complementary. The Plus menu serves first-time users who don't know the shortcut; the Cmd-K palette serves power users who do. This is a healthy redundancy, not a duplication.

4.2 The Discovery Problem

The one UX cost: a first-time user who discovers the Plus menu may never learn that the Cmd-K palette exists, and vice versa. The platform does not surface the Cmd-K shortcut prominently — the only hint is the «⌘K» indicator on the search button. A small «Astuce: appuyez sur ⌘K pour ouvrir la palette de commandes» toast on first visit would close the discovery gap. Effort: 30 minutes for a one-time toast.

4.3 The «Paramètres» Placeholder

The Paramètres (Settings) item in the Plus menu is currently a placeholder — clicking it opens an empty view with just «Paramètres» as the H1 and a «Bientôt disponible» message. This is honest (the team is signaling it's not built yet) but disappointing for users who click expecting settings. Recommend either removing the item until settings ships, or populating it with the actual settings that exist (theme, language, account — none of which exist as a unified settings page yet). Effort: 1 hour to remove or 1 day to populate.

Gap · Paramètres Placeholder

The Paramètres item opens an empty «Bientôt disponible» view. Either remove the item until settings ships, or populate it with the existing settings (theme toggle, language preference — both already exist but are scattered). Effort: 1 hour to remove, 1 day to populate a real settings page.

Final Assessment & Phased Rollout

The Plus Menu is a **solid B+ feature** — correct ARIA menu-button pattern, correct keyboard behavior, correct mobile collapse, healthy redundancy with the Cmd-K palette. Two small gaps prevent an A grade: the outside-click focus return issue (30 minutes) and the Paramètres placeholder (1 hour to remove or 1 day to populate). Total grade: **B+**.

5.1 Phased Fix Plan

PHASE	FIXES	EFFORT	OUTCOME
Phase 1 · Now (Today)	Outside-click focus return + Paramètres placeholder removal	~1.5 hours	Grade lifts to A-. A11y fix + honest UI.
Phase 2 · Next (This week)	Populate a real Paramètres page (theme, language, account)	~1 day	Grade lifts to A. Unified settings surface.
Phase 3 · Later (Quarter 2)	First-visit Cmd-K discovery toast	~30 minutes	Closes the discovery gap between Plus menu and Cmd-K.

5.2 Cross-Feature Dependencies

- ✓ Feature #11 (Cmd-K Palette) — provides the keyboard path to the same 5 destinations; healthy redundancy
- ✓ Feature #42 (Theme System) — Nuancier item opens the palette switcher covered in #42
- ✓ Feature #36 (Copilot Core) — Copilote item opens the modal covered in #36
- ✓ Feature #34 (Barcode Scanner) — Scanner item opens the scanner view
- ⚠ Feature #1 (Routing) — Plus menu items use setState navigation, not real routes; will become real routes when #1 ships

5.3 Final Assessment

5 PRIMARY NAV ITEMS	5 PLUS MENU ITEMS	2 GAPS
B+ GRADE	~1.5h PHASE 1 EFFORT	~1d PHASE 2 EFFORT

FINAL VERDICT · B+ GRADE, 1.5 HOURS FROM A-

The Plus Menu is **one of the better-implemented features in the #38-#47 range**. The ARIA menu-button pattern is correct, the keyboard behavior is solid, the mobile collapse preserves priority, and the redundancy with the Cmd-K palette (#11) is healthy rather than wasteful. Two small gaps prevent an A grade: the outside-click focus return (30 minutes) and the Paramètres placeholder (1 hour to remove, 1 day to populate). Phase 1 (1.5 hours) lifts the grade from B+ to A-. Phase 2 (1 day) lifts it to A. The feature is worth celebrating — it follows the WAI-ARIA menu pattern textbook-correctly.

Immediate Next Steps

1. Fix the outside-click handler to return focus to the Plus button — 30 minutes.
2. Either remove the Paramètres item or replace the placeholder with a real settings page — 1 hour (remove) or 1 day (populate).
3. Defer the Cmd-K discovery toast to Phase 3.
4. No fix needed on the mobile collapse pattern — it's correct.
5. No fix needed on the ARIA pattern — it's textbook.

45

5 primary + 5 overflow items. ARIA menu-button textbook-correct. Mobile collapse preserves priority. 1.5 hours of fixes lifts to A-.
