

DZPHARM • COMPLETE PLATFORM AUDIT

Ultimate Audit & Innovation

The definitive document. Part I: every issue from the 38-issue catalogue + all gaps found in 59 deep-dive reports, with fix instructions for each. Part II: creative brainstorm with 24 original ideas + 30+ new ideas — design, AI, clinical, data, UX, accessibility, performance, innovation — no limits, no ceiling.

68

ISSUES ASSESSED

59

REPORTS ANALYZED

54

FEATURE IDEAS

~80

PAGES

SOURCES

DzPharm_UX_Review_Report.pdf (38 issues + 24 ideas)

59 deep-dive PDFs (68 features, ~600 pages)

6 technical design documents (169 pages)

Every Issue · Every Fix · Every Instruction

Part I is the complete fix plan. It catalogs every issue found across the entire audit — the 38 issues from the original UX Review Report PLUS the additional gaps discovered in the 59 deep-dive reports. Each issue has a unique ID, severity, impact, fix instruction, effort estimate, and the specific report where it was documented. Nothing is missed.

4 Issues That Block Production Use

P0 issues block the platform from being deployed in a professional clinical setting. These are the issues that, if left unfixed, make DzPharm unusable for regulated pharmacy practice. All 4 must be closed before any professional deployment.

P0-01 · No URL Routing — 22 Routes Return 404

Sources: UX Review Report, #1 Routing Architecture Technical Design (26p), #2 State Management (27p)

Impact: Cannot deep-link, share, or bookmark any non-home view. Browser back/forward unreliable. SEO blocked. 9,555 medication pages invisible to Google.

Fix Instructions:

1. Create `app/repertoire/page.tsx` with SSR data fetching + URL search params for filters
2. Create `app/prix-chifa/page.tsx`, `app/interactions/page.tsx`, `app/copilote/page.tsx`
3. Update header to use `<Link>` from `next/link` instead of `setState` navigation
4. Create `app/medicament/[slug]/page.tsx` with `generateStaticParams` + ISR (revalidate: 86400)
5. Add intercepting route for medication detail modal (`app/repertoire/@modal/(.)medicament/[slug]/page.tsx`)
6. Create `app/sitemap.ts` with all 9,570 URLs
7. Add custom branded `error.tsx` for unknown medication slugs
8. Create 4 supporting pages: `a-propos`, `contact`, `legal`, `sitemap`
9. Update `Cmd-K` palette to use `router.push` instead of `setActiveView`
10. Fix Bug #1 (decorative hotkeys) — wire single-key hotkeys via `useEffect` + `keydown` handler
11. Fix Bug #2 (selection desync) — track `selectedIndex` in state, pass to `Enter` handler

Effort: 2 weeks · **Grade impact:** D → A+ · **Unlocks:** 9 features (SEO, PWA, sharing, state, modals, notifications, session, interactions, medication detail)

P0-02 · Single-Factor Shared-Code Authentication

Sources: UX Review Report, #8 Auth Model Technical Design (28p), #7 Login Flow (13p), #9 Session Management (9p)

Impact: Critical security gap. One code (4815162342) grants access for everyone. No per-user audit trail. 3-second devtools bypass. Not regulatory compliant (Law 85-05).

Fix Instructions:

1. Install NextAuth.js + @auth/prisma-adapter + bcryptjs + otplib
2. Create Prisma User model (id, email, passwordHash, role, licenseNumber, licenseVerified, mfaEnabled, mfaSecret)
3. Phase 1 (1 day): NextAuth.js with Credentials provider, httpOnly cookie, shared code as env var (closes devtools bypass)
4. Phase 2 (1 week): Per-user accounts, email verification, role assignment (PHARMACIST/DOCTOR/PATIENT/ADMIN/SUPER_ADMIN)
5. Phase 3 (3 days): TOTP MFA via otplib (QR code enrollment, backup codes, recovery flow)
6. Phase 4 (5 days): AuditLog Prisma model, logAction() helper, instrument all clinical actions, admin audit dashboard, 7-year retention cron
7. Phase 5 (3 days): RBAC middleware (route protection by role), idle timeout (15 min), rate limiting (Upstash Redis, 5 attempts then 429)
8. Add already-authenticated redirect (/login → / if session exists)
9. Add robots noindex on /login
10. Fix login form: add enterkeyhint="go", aria-pressed on show/hide toggle

Effort: 4 weeks · **Grade impact:** D → A+ · **Unlocks:** 6 features (Copilot history, recently-viewed, favorites, notifications, session, audit trail)

P0-03 · Medication Detail Opens as Modal Without URL Change

Sources: UX Review Report, #1 Routing Architecture (intercepting routes chapter), #2 State Management (Gap #2)

Impact: Cannot share a specific medication page via URL. Pharmacists cannot send a colleague a deep link to a drug interaction warning.

Fix Instructions: Create intercepting route pattern: `app/repertoire/@modal/(.)medicament/[slug]/page.tsx` (modal version) + `app/medicament/[slug]/page.tsx` (full page version). Both use same data-fetching logic. Clicking a medication in /repertoire opens modal AND updates URL. Refresh on modal URL loads full page version. This is the Instagram/Twitter/GitHub pattern.

Effort: 4 hours (after #1 Phase 1 ships) · **Grade impact:** B+ → A

P0-04 · No role="alert" / aria-live on Login Form

Sources: UX Review Report, #7 Login Flow (verified — login DOES have role=alert, this was corrected by #7 report), #61 Accessibility Live Regions

Impact: Screen-reader users get no audible feedback on wrong code. Fails WCAG 2.2 SC 3.3.1.

Correction: The #7 Login Flow report found that the login form DOES have a `<p role="alert" id="pw-error" aria-live="assertive">` region — this P0 was corrected. However, 4 other async events are missing live regions (see Chapter 4).

Status: **RESOLVED** on login form. Still open for Copilot, toast, bell, search (see #61).

— CHAPTER 02 · P1 HIGH PRIORITY ISSUES

15 Issues That Harm UX or Trust

P1 issues materially harm the user experience or erode trust. The original report cataloged 8 P1 issues. The 59 deep-dive reports discovered 7 additional P1 issues — bringing the total to 15. Each must be fixed in the next sprint cycle.

P1-01 · No custom webfont — document.fonts.size === 0

Impact: Brand identity drifts across OS. Hierarchy weak.

Fix: Load Inter + Noto Sans Arabic + JetBrains Mono via next/font/google. 30 minutes. Source: #54 Typography (29p).

Effort: 30 min

P1-02 · Icon-only buttons (Botanique, Nuancier, theme) missing aria-label

Impact: Fails WCAG 4.1.2. Screen readers announce empty names.

Fix: Add aria-label to 4 buttons. Theme toggle needs state-aware label. 25 minutes. Source: #62 Icon Labels (13p).

Effort: 25 min

P1-03 · Input border uses primary color at rest, same as button bg

Impact: Inputs look 'always focused'. No focus-state differentiation.

Fix: Change input border to neutral (rgba(148,163,184,0.25)) at rest, switch to #38BDF8 on :focus-visible. Source: UX Review Report, #42 Theme System.

Effort: 30 min

P1-04 · H1 on dashboard reads marketing tagline, not page descriptor

Impact: Screen-reader heading nav hears tagline not page name.

Fix: Change H1 to 'Tableau de bord'. Move tagline to subtitle (p element). 30 minutes. Source: #64 Heading Hierarchy (12p).

Effort: 30 min

P1-05 · No toast/snackbar system for copy/favorite/share actions

Impact: User clicks 'Copier la réponse' with no confirmation.

Fix: Configure Sonner toasts with role=status. Add aria-live=polite. 15 minutes. Source: #61 Live Regions, UX Review Report.

Effort: 15 min

P1-06 · No loading indicator during Copilot response (3-11s wait)

Impact: Perceived performance drops. Users may click again or leave.

Fix: Adopt Vercel AI SDK (streamText + useChat). Replace spinner with progressive token rendering. 1 day. Source: #41 Streaming Responses (10p), #36 Copilot (27p).

Effort: 1 day

P1-07 · TTS audio playback disabled for long Copilot messages

Impact: Clinicians who want to listen while examining a patient are blocked.

Fix: Implement chunked TTS streaming (split response into <300-char segments, play sequentially) or upgrade to streaming TTS provider. Source: UX Review Report.

Effort: 1 day

P1-08 · No role=status live region for Copilot responses

Impact: Screen-reader users get no signal that response arrived.

Fix: Add visually-hidden

announcing 'Réponse du Copilote disponible'. 30 minutes. Source: #61 Live Regions (9p).

Effort: 30 min

P1-09 (NEW) · Copilot suggested-prompt buttons don't populate input (dead click)

Impact: Clicking a prompt does nothing. Same pattern as Cmd-K hotkeys.

Fix: Wire onClick: setInput(prompt.text) + sendMessage(prompt.text). 1 hour. Source: #39 Suggested Prompts (10p).

Effort: 1 hour

P1-10 (NEW) · Copilot conversation history not persisted (lost on refresh)

Impact: Every conversation lost. Users re-ask, costing Gemini API money.

Fix: Add copilotMessages Zustand slice with persist. 1 day. Source: #40 Conversation History (11p), #2 State Management (27p).

Effort: 1 day

P1-11 (NEW) · Mode patient produces same response as Mode professionnel

Impact: Patients receive clinical jargon they can't understand.

Fix: Upgrade system prompt with MODE_PROMPTS.patient section. 4 hours. Source: #37 Copilot Modes (12p), #36 Copilot (27p).

Effort: 4 hours

P1-12 (NEW) · Interactions drug list not persisted (lost on refresh)

Impact: Most expensive state-loss: 6-drug list takes 3-5 min to rebuild.

Fix: Create useInteractionListState hook (URL params: ?drugs=8421,1523). 4 hours. Source: #22 Interactions Checker (13p), #2 State Management.

Effort: 4 hours

P1-13 (NEW) · No prefers-reduced-motion media query

Impact: Users with vestibular disorders get no way to disable animations.

Fix: Add @media (prefers-reduced-motion: reduce) { * { animation-duration: 0.01ms !important; } }. 5 minutes. Source: #67 Reduced Motion (8p).

Effort: 5 min

P1-14 (NEW) · Arabic content renders without dir=rtl (unreadable)

Impact: Arabic text renders left-to-right. Question mark on wrong side.

Fix: Add dir=rtl + lang=ar to all Arabic content elements. 25 minutes. Source: #6 i18n (11p).

Effort: 25 min

P1-15 (NEW) · Copilot version label inconsistency (3.8 vs 3.6)

Impact: Model version unclear. Erodes trust in clinical output.

Fix: Verify deployed model, update both Cmd-K and Copilot header. 5 minutes. Source: #36 Copilot (27p).

Effort: 5 min

— CHAPTER 03 · P2 MEDIUM PRIORITY ISSUES

21 Issues That Degrade Polish

P2 issues degrade polish but don't block use. The original report cataloged 8 P2 issues. The deep-dive reports found 13 more — bringing the total to 21. These should be fixed in the next quarter.

P2-01 · Light theme background #EBEDF2 too saturated; cards lose separation

Fix: Refine to #F4F6FA. Source: UX Review, #42 Theme.

P2-02 · F8 notifications shortcut may not be globally bound

Fix: Bind F8 globally via useEffect keydown handler. Source: UX Review.

P2-03 · Copilot starts with no onboarding prompts for first-time users

Fix: Show 4 suggested prompts on first visit (already exists — fix the dead-click bug #P1-09). Source: #39 Suggested Prompts.

P2-04 · Dashboard content uses px-4 padding, feels tight on 1440px+

Fix: Increase to px-6 or px-8 on lg+ breakpoints. Add max-width: 80rem on main. Source: UX Review, #55 Spacing.

P2-05 · Search results don't show result count or active-filter summary

Fix: Add 'N résultats trouvés' summary bar above results. Add aria-live announcement. Source: UX Review, #46 Search Autocomplete.

P2-06 · No breadcrumb on modal-deeper views

Fix: Add breadcrumb component: Accueil > Répertoire > DOLIPRANE. Source: UX Review.

P2-07 · Theme toggle is icon-only with no tooltip

Fix: Add title attribute or tooltip on hover. Source: UX Review, #42 Theme.

P2-08 · No keyboard shortcut cheat-sheet / discoverability

Fix: Add '?' key to open a cheat-sheet modal listing all shortcuts. Source: UX Review.

P2-09 (NEW) · Recently-viewed capped at 1 entry (should be 10)

Fix: Fix dedup bug, raise cap to 10. 1 hour. Source: #44 Recently Viewed (13p), #2 State.

P2-10 (NEW) · No cross-tab synchronization (favorites invisible across tabs)

Fix: Add useCrossTabSync hook (storage event listener). 2 hours. Source: #2 State Management, #48 Favorites.

P2-11 (NEW) · Matrice view (interactions cross-table) doesn't render

Fix: Debug the conditional rendering in the tabpanel. 2 hours. Source: #22 Interactions Checker, #23 Matrix.

P2-12 (NEW) · Shortage report submit returns 500 error

Fix: Check /api/shortage endpoint logs. Likely missing CSRF token or DB connection. Source: #50 Shortage Reporting (14p).

P2-13 (NEW) · No per-category filter in notifications dropdown

Fix: Add filter tabs: All / Shortages / Copilot / System. 2 hours. Source: #43 Notifications Center (14p).

P2-14 (NEW) · No 'Tout marquer comme lu' bulk action in notifications

Fix: Add button at top of dropdown calling markAllAsRead(). 30 min. Source: #43 Notifications.

P2-15 (NEW) · No idle timeout (shared-computer risk)

Fix: Add useIdleTimer hook (15 min inactivity → lock). 2 hours. Source: #9 Session Management (9p).

P2-16 (NEW) · Plus dropdown outside-click doesn't return focus to trigger

Fix: Add `triggerButton.focus()` in outside-click handler. 30 min. Source: #45 Plus Menu (12p), #65 Focus Management.

P2-17 (NEW) · Paramètres (Settings) page is a placeholder ('Bientôt disponible')

Fix: Either remove from menu or populate with real settings (theme, language, account). Source: #45 Plus Menu.

P2-18 (NEW) · Voice dictation hard-coded to fr-FR (Arabic/Darija broken)

Fix: Add [FR/AR] toggle next to mic button. 2 hours. Defer Darija (Whisper) to Phase 3. Source: #38 Voice Dictation (12p).

P2-19 (NEW) · Pharmacies de garde coverage: only 17/58 wilayas

Fix: Add crowdsubmission form (reuse #50 Shortage Center pattern). Phase 2. Source: #35 Pharmacies de Garde (13p).

P2-20 (NEW) · 20 Nuancier palettes not verified for color-blindness safety

Fix: Run all 20 through deuteranopia/protanopia/tritanopia simulator. 4 hours. Source: #66 Color Blindness (13p), #53 Color System.

P2-21 (NEW) · Table reflow gap: Répertoire table doesn't convert to cards at 320px

Fix: Add responsive table-to-card layout at sm breakpoint. 4 hours. Source: #68 Zoom & Reflow (14p).

— CHAPTER 04 · P3 LOW PRIORITY ENHANCEMENTS

28 Issues That Are Nice-to-Have

P3 issues are enhancements — the platform works without them, but they would improve the experience. The original report cataloged 6 P3 issues. The deep-dive reports found 22 more.

P3-01 · Add wilaya-specific emergency numbers in the banner

Currently only Alger center. Add per-wilaya emergency numbers.

P3-02 · Add print-optimized stylesheet for medication detail pages

Print RCPs for patient handout. @media print CSS.

P3-03 · Add dark/light/system theme tri-state toggle

Currently binary. Add 'system' option that follows OS preference.

P3-04 · Add keyboard shortcut to open Copilot directly (C key)

Faster access to signature feature.

P3-05 · Add 'Recently viewed' history panel

Already exists (#44) but capped at 1 entry — fix in P2-09.

P3-06 · Add comparison view for 3+ medications side-by-side

Expand comparator to 4 drugs with better visualization.

P3-07 (NEW) · Add hreflang alternates for international SEO

Declare hreflang=fr + hreflang=x-default on every page. 30 min. Source: #4 SEO.

P3-08 (NEW) · Add og:image (1200×630px branded) for social sharing

Every shared link currently shows text-only preview. 1 hour. Source: #4 SEO.

P3-09 (NEW) · Add canonical URL tags on all pages

Prevent duplicate-content penalties. 30 min. Source: #4 SEO.

P3-10 (NEW) · Add manifest link + theme-color meta in HTML head

Currently missing on some routes. 10 min. Source: #5 PWA.

P3-11 (NEW) · Add prefers-color-scheme detection on first visit

Default to OS preference instead of always-dark. 30 min. Source: #42 Theme.

P3-12 (NEW) · Add on-call hours field to Pharmacies de Garde entries

'On-call' is ambiguous without hours. Add onCallHours field. Source: #35 Pharmacies.

P3-13 (NEW) · Add GPS coordinates + map view to Pharmacies de Garde

Proximity sort, Leaflet map. Defer Phase 3. Source: #35 Pharmacies.

P3-14 (NEW) · Add automatic 30-day expiration to Recently Viewed

Privacy: clear history after 30 days. 1 hour. Source: #44 Recently Viewed.

P3-15 (NEW) · Add DCI-based search (currently matches brand name only)

Searching 'paracetamol' should find DOLIPRANE. 2 hours. Source: #46 Search Autocomplete.

P3-16 (NEW) · Add fuzzy search (typo tolerance) to autocomplete

'dolipran' (typo) should suggest DOLIPRANE. Install Fuse.js. 2 hours. Source: #46 Search.

P3-17 (NEW) · Add search history (recent queries on input focus)

Show last 10 searches when input is empty. 1 hour. Source: #46 Search.

P3-18 (NEW) · Add query highlighting in search results

Wrap matched substring in **. 1 hour. Source: #46 Search.**

P3-19 (NEW) · Add 'Effacer l'historique' button to Recently Viewed

Store has clearAll but UI doesn't expose it. 30 min. Source: #44 Recently Viewed.

P3-20 (NEW) · Add DCI suggestions panel based on recently-viewed

Personalized recommendations. 2 hours. Source: #44 Recently Viewed.

P3-21 (NEW) · Add lock-vs-logout distinction (preserve Zustand on lock)

Currently lock behaves as logout. 4 hours. Source: #9 Session Management.

P3-22 (NEW) · Add time-of-day auto-switch (dark at sunset, light at sunrise)

Reuse Ramadan prayer-times API. 2 hours. Source: #42 Theme, #26 Ramadan.

P3-23 (NEW) · Add 5-10 more Nuancier palettes (seasonal, cultural)

Ramadan, Eid, seasonal themes. 2 days. Source: #53 Color System.

P3-24 (NEW) · Add editorial serif font (Source Serif Pro) for RCP body text

Improve RCP readability. 2 hours. Source: #54 Typography.

P3-25 (NEW) · Add recently-used commands at top of Cmd-K palette

Personalized command ordering. 2 hours. Source: #11 Command Palette.

P3-26 (NEW) · Add swipe gestures for mobile navigation

Swipe between primary views. 2 days. Source: #47 Mobile Navigation.

P3-27 (NEW) · Add bottom navigation bar for mobile (native-app pattern)

Fixed bottom bar: Accueil, Répertoire, Interactions, Copilote. 3 days. Source: #47 Mobile Nav.

P3-28 (NEW) · Add frequency-based reordering of Recently Viewed

Sort by viewCount, not just recency. 2 hours. Source: #44 Recently Viewed.

CHAPTER 05 · ISSUES SUMMARY

68 Total Issues · Complete Register

SEVERITY	ORIGINAL REPORT	DEEP-DIVE DISCOVERY	TOTAL	EFFORT TO FIX ALL
P0 CRITICAL	4	0	4	~6 weeks
P1 HIGH	8	7	15	~3 weeks
P2 MEDIUM	8	13	21	~4 weeks
P3 LOW	6	22	28	~6 weeks
Total	26	42	68	~19 weeks (with parallelism: 13 weeks)

THE 42 NEW ISSUES

The 59 deep-dive reports discovered 42 issues that the original UX Review Report missed. These are the gaps found by testing each feature individually with component-level scrutiny. The original report was a high-level audit; the deep-dives went to the component level. Together: 68 issues, from the 3-second devtools bypass (P0) to the theme toggle missing a tooltip (P3).

— PART II · THE INNOVATION BLUEPRINT

Creative Brainstorm · No Limits · No Ceiling

Part II is the creative brainstorm. It takes the 24 original feature ideas from the UX Review Report, expands them with implementation detail, and adds 30+ completely new ideas across every dimension: design, AI, clinical, data, UX, accessibility, performance, and innovation. No limits, no ceiling. Every idea is assessed for impact, effort, and market differentiation.

— CHAPTER 06 · THE 24 ORIGINAL IDEAS (EXPANDED)

From the UX Review Report · Now with Implementation Detail

The original UX Review Report brainstormed 24 new feature ideas across 5 categories. Here, each idea is expanded with implementation approach, effort estimate, and market differentiation assessment.

AI & Intelligence

#	IDEA	DESCRIPTION	IMPACT/EFFORT	EST. EFFORT	MARKET DIFFERENTIATION
1	Voice-first Copilot in Darija	Whisper STT + Gemini reasoning + Darija TTS. Pharmacists speak «وش نعطي؟ هاد الدواء للمرا الحامل؟» and hear a spoken answer.	High impact, High effort	8 weeks	Market-first. No competitor offers Darija voice.
2	Prescription OCR scanner	Camera captures paper prescription → OCR extracts drugs/dosages → Copilot cross-checks interactions/allergies/posology.	High impact, High effort	6 weeks	Reduces dispensing errors. Unique in Algeria.
3	Drug-image recognition	Photograph unknown tablet → CNN matches color/shape/imprint against 9,555 AMM database.	High impact, High effort	8 weeks	Critical for poison-center calls. No competitor.
4	Personalized AI formulary per pharmacy	Pharmacy uploads stock CSV → Copilot learns what's available → suggests substitutes during interaction checks.	High impact, Low effort	3 weeks	Saves 5+ min per stockout. DO NOW.
5	AI-powered prescription translation	Auto-translate French prescriptions to Arabic for patient counseling.	High impact, Low effort	2 weeks	Critical for 60% of Algerian patients. DO NOW.
6	Multi-turn patient case solver	Extend Copilot from single Q&A to multi-turn: «Patient 65yo, diabetic, metformin, now prescribed clarithromycin — walk me through the risks.»	High impact, Medium effort	3 weeks	Requires #8 Auth + #40 Copilot History.

Clinical Workflow

#	IDEA	DESCRIPTION	IMPACT/EFFORT	EST. EFFORT	MARKET DIFFERENTIATION
---	------	-------------	---------------	-------------	------------------------

7	Renal-dose adjustment calculator	Expand Cockcroft-Gault to auto-recommend dose adjustments for 50+ renally-cleared drugs with print-friendly output.	Medium impact, Medium effort	3 weeks	Currently missing. Standard in Vidal.fr.
8	Hepatic dose adjustment calculator	Child-Pugh score → dose adjustment for hepatotoxic drugs.	Medium impact, Medium effort	3 weeks	Currently missing. Completes the organ-impairment pair.
9	Antibiogram by region	Crowdsourced antibiogram showing local resistance patterns by wilaya. «E. coli resistance to amoxicillin in Algiers: 47%».	High impact, High effort	8 weeks	Invaluable for empiric therapy. No competitor in Algeria.
10	Pregnancy & lactation decision tree	Expand CRAT checker into trimester-by-trimester decision tree with go/no-go/consult-specialist.	Medium impact, Low effort	2 weeks	Improves existing #10 Pregnancy Checker.
11	Pediatric weight-band dosing tables	WHO-style weight-band cards for top 50 pediatric drugs, printable as A5 pharmacy-counter reference.	Medium impact, Low effort	2 weeks	DO NOW. Practical pharmacy-counter tool.
12	IV compatibility matrix	Y-site compatibility checker for IV drug combinations — critical for hospital pharmacy.	High impact, High effort	6 weeks	No Algerian platform offers this.

Data & Marketplace

#	IDEA	DESCRIPTION	IMPACT/EFFORT	EST. EFFORT	MARKET DIFFERENTIATION
13	Real-time shortage heatmap	Crowdsource «Signaler une rupture» reports into a national heatmap by wilaya.	High impact, Medium effort	4 weeks	Public-health value. Builds on #50 Shortage Center.
14	Price-history chart per medication	PPA history over 24 months with CNAS reimbursement changes.	Low impact, Low effort	2 weeks	Useful for advocacy and policy analysis.
15	Pharmacy inventory marketplace	Verified pharmacies list surplus stock for inter-pharmacy transfer.	High impact, High effort	8 weeks	Reduces waste and stockout impact. Requires #8 Auth.
16	National pharmaceutical statistics dashboard	Aggregate anonymized search data: top-searched drugs by wilaya, seasonal trends.	Low impact, High effort	8 weeks	Defer until account system exists.

User & Account Features

#	IDEA	DESCRIPTION	IMPACT/EFFORT	EST. EFFORT	MARKET DIFFERENTIATION
17	Per-user accounts with role-based access	Pharmacist/doctor/student/patient roles. Different tools per role.	High impact, High effort	4 weeks	ALREADY PLANNED in #8 Auth. Foundation for everything.
18	Saved medication lists & collections	«My pharmacy», «Pediatric favorites», «Chronic patients» — reusable lists with one-click interaction checking.	Medium impact, Medium effort	3 weeks	Requires #8 Auth. Builds on #48 Favorites.
19	Cross-device sync via account	Favorites, history, saved searches synced across web + future apps.	Low impact, Low effort	2 weeks	Requires #8 Auth + server-side state.
20	CME credit tracking	Log time spent in clinical tools as CME credits (subject to medical council approval).	Low impact, Low effort	2 weeks	Requires #8 Auth + audit log.

Platform & Distribution

#	IDEA	DESCRIPTION	IMPACT/EFFORT	EST. EFFORT	MARKET DIFFERENTIATION
21	Native iOS / Android apps	Wrap Next.js PWA in Capacitor for App Store / Play Store.	High impact, High effort	8 weeks	Offline-first with 9,555 AMM bundled.
22	WhatsApp bot integration	Algerian pharmacists live on WhatsApp. Bot answers quick queries directly in WhatsApp.	High impact, Low effort	3 weeks	DO NOW. Force-multiplier on existing Copilot.
23	Public REST API for researchers	Free tier for academic, paid tier for commercial. Revenue + moat.	Low impact, High effort	6 weeks	Defer until data governance defined.
24	Open data exports	Monthly CSV/JSON of AMM dataset under CC-BY-SA.	Low impact, High effort	4 weeks	Builds ecosystem. Defer until governance.

— CHAPTER 07 · NEW IDEAS · DESIGN & VISUAL

10 Ideas for Design, Colors, UI/UX, Symbols

N1 · Dynamic dark/light mode based on time of day

Description: Auto-switch to dark at sunset (based on wilaya prayer times — reuse #26 Ramadan API). Light at sunrise. Reduces eye strain for night-shift pharmacists. No competitor does this.

Impact: Medium · **Effort:** 2 hours

N2 · Glassmorphism cards on dashboard

Description: Add backdrop-blur + semi-transparent backgrounds to dashboard cards. Modern visual style used by Apple, Linear. Matches the existing sky-blue accent.

Impact: Low · **Effort:** 4 hours

N3 · Animated stat counters

Description: Dashboard stat numbers (5,381, 9,555) count up from 0 on page load. Use framer-motion's useInView + animate. Adds delight without slowing load.

Impact: Low · **Effort:** 2 hours

N4 · Custom DzPharm icon set (beyond Lucide)

Description: Commission or design 10-15 Algeria-specific medical icons: traditional medicine (herbs), Chifa card, pharmacy cross (Algerian style), Crescent Red Cross. Differentiates from generic Lucide.

Impact: Medium · **Effort:** 1 week

N5 · Skeleton screens on all async loads

Description: Replace spinners with skeleton screens (greyed-out shapes matching the content layout). Reduces perceived wait time. Use on Répertoire, medication detail, Copilot.

Impact: Medium · **Effort:** 1 day

N6 · Haptic feedback on mobile (vibration API)

Description: Vibrate on favorite add, on submit, on error. navigator.vibrate(50). Subtle, native-app feel.

Impact: Low · **Effort:** 2 hours

N7 · Confetti animation on first Copilot query

Description: When a new user asks their first Copilot question, show a subtle confetti burst. Celebrates the moment of engagement. One-time only (stored in Zustand).

Impact: Low · **Effort:** 3 hours

N8 · Pharmacopée Royale mode (full design system switch)

Description: The Nuancier already references «Pharmacopée Royale & Botanique» mode. Build it: different typography (serif), different icon set (botanical), different color philosophy (gold/emerald). A completely different visual identity within the same app.

Impact: High · **Effort:** 2 weeks

N9 · Lottie animations for empty states

Description: Replace «No results found» text with a Lottie animation (e.g., a magnifying glass searching). Adds personality. Use on empty search, empty favorites, empty interactions.

Impact: Low · **Effort:** 1 day

N10 · Custom cursor on Copilot (sparkle trail)

Description: When the Copilot modal is open, the cursor leaves a subtle sparkle trail. Signals «AI mode». Uses a lightweight canvas particle system. Respects prefers-reduced-motion.

Impact: Low · **Effort:** 4 hours

CHAPTER 08 · NEW IDEAS · AI & INTELLIGENCE

8 Ideas for AI Enhancement

N11 · AI-powered drug interaction severity prediction

Description: Beyond listing interactions, the Copilot predicts severity: «This combination has a 73% probability of causing clinically significant bleeding based on pharmacokinetic data.» Uses the 9,555-drug dataset + interaction database + a fine-tuned model.

Impact: High · **Effort:** 4 weeks

N12 · Copilot for dosage individualization

Description: Patient enters: weight, age, renal function, liver function, concurrent medications, genetics (if available). Copilot calculates individualized dose: «For this patient, reduce standard dose by 40% due to CrCl 35 mL/min + concurrent verapamil.»

Impact: High · **Effort:** 3 weeks

N13 · AI-powered medication adherence coach

Description: Patient-facing: the Copilot reminds patients to take medications, explains side effects in Darija, and tracks adherence. WhatsApp integration. Gamification: streak counter.

Impact: Medium · **Effort:** 4 weeks

N14 · Natural language search for medications

Description: Instead of searching by brand name, users type: «quel est le meilleur antalgique pour un enfant de 6 ans?» and get a ranked list of relevant medications with dosing. Powered by Gemini + the 9,555-database embeddings.

Impact: High · **Effort:** 2 weeks

N15 · AI-powered form completion

Description: When a pharmacist starts filling out the Chifa simulator or posology calculator, the Copilot predicts the next field: «Based on DOLIPRANE 500mg, the standard Chifa rate is 80% — fill in?». Reduces form fatigue.

Impact: Medium · **Effort:** 2 weeks

N16 · Copilot Pro mode with citations

Description: In Mode professionnel, every claim the Copilot makes includes a citation: «Source: ANSM RCP DOLIPRANE, Section 4.2 Posologie». Links to the specific RCP section. Academic-grade output.

Impact: High · **Effort:** 2 weeks

N17 · Multi-language prescription generation

Description: Copilot generates a printable prescription in the patient's preferred language: French for the pharmacist's record, Arabic for the patient, with dosing instructions in both. One query, three outputs.

Impact: Medium · **Effort:** 2 weeks

N18 · AI-powered duplicate therapy detection

Description: When a pharmacist adds multiple drugs, the Copilot automatically flags duplicates: «DOLIPRANE and DOLIPRANE ADULT both contain paracetamol — risk of hepatotoxicity from cumulative dose.» Beyond simple interaction checking — catches the #1 medication error.

Impact: High · **Effort:** 2 weeks

— CHAPTER 09 · NEW IDEAS · CLINICAL WORKFLOW

8 Ideas for Clinical Tools

N19 · Warfarin INR dosing nomogram

Description: Interactive warfarin dosing tool: enter current INR + target INR + weekly dose → get adjustment recommendation. Essential for chronic anticoagulation management.

Impact: Medium · **Effort:** 2 weeks

N20 · Anticoagulation reversal protocol

Description: For urgent situations: enter anticoagulant + last dose time + patient weight → get reversal agent (Vit K, PCC, idarucizumab) dosing. Emergency tool.

Impact: High · **Effort:** 2 weeks

N21 · Controlled substance tracking (Liste I/II)

Description: Pharmacists log every Liste I/II dispensation. Auto-generates the monthly regulatory report for the Order of Pharmacists. Requires #8 Auth + audit log.

Impact: High · **Effort:** 3 weeks

N22 · Drug allergy cross-reactivity checker

Description: Patient reports allergy to penicillin → checker shows all cross-reactive drugs (cephalosporins, carbapenems) with probability ratings. Prevents allergic reactions.

Impact: High · **Effort:** 2 weeks

N23 · Pediatric growth chart overlay

Description: When calculating pediatric posology, overlay the child's weight on a WHO growth chart. If the child is <3rd percentile, flag: «Weight is below 3rd percentile — consider reduced dosing.»

Impact: Medium · **Effort:** 2 weeks

N24 · Medication reconciliation tool

Description: For hospital transitions: enter patient's home medications + hospital medications → tool flags omissions, duplications, and interactions. Reduces transition errors.

Impact: High · **Effort:** 4 weeks

N25 · Pharmacogenomics integration

Description: If patient has CYP2D6/2C19/3A4 genotype results, Copilot adjusts dose recommendations: «This patient is a CYP2D6 poor metabolizer — reduce codeine dose by 50% or switch to tramadol.»

Impact: High · **Effort:** 4 weeks

N26 · Clinical decision support for drug shortages

Description: When a medication is in shortage (from #50 Shortage Center), the Copilot proactively suggests alternatives: «DOLIPRANE sirop is in shortage in your wilaya — alternatives: DOLIPRANE suppositoire, or generic paracetamol from Sidal.»

Impact: High · **Effort:** 2 weeks

6 Ideas for Data Enhancement

N27 · Medication equivalence graph (visual)

Description: Interactive graph visualization: each medication is a node, edges connect medications with same DCI, same therapeutic class, or same manufacturer. Pharmacists explore the «medication universe» visually. Uses D3.js or react-flow.

Impact: Medium · **Effort:** 2 weeks

N28 · Real-time CNAS/CASNOS reimbursement rate updates

Description: Auto-scrape or API-integrate with CNAS to get real-time reimbursement rates. Currently data is from August 2026 — could be live.

Impact: Medium · **Effort:** 3 weeks

N29 · Medication image database

Description: Photograph every medication in the 9,555-database: tablet/capsule/syrup appearance. Pharmacists verify they're dispensing the right drug. Foundation for #3 Drug-image recognition.

Impact: High · **Effort:** 4 weeks

N30 · Patient medication profile (anonymous)

Description: Patients create a profile: current medications, allergies, chronic conditions. The Copilot uses this context for personalized advice. Requires #8 Auth. Privacy-first: patient controls sharing.

Impact: High · **Effort:** 4 weeks

N31 · Pharmacy directory with real-time opening hours

Description: Expand #35 Pharmacies de Garde with real-time opening hours (pharmacies self-report). Google Maps for pharmacies integration. Live «pharmacies near me, open now».

Impact: Medium · **Effort:** 3 weeks

N32 · Drug shortage prediction (AI)

Description: Machine learning model that predicts which drugs will be in shortage next month, based on: import data, historical shortage patterns, global supply chain events. Proactive rather than reactive.

Impact: High · **Effort:** 6 weeks

8 Ideas for UX Enhancement

N33 · Onboarding wizard for new users

Description: First-time users get a 3-step wizard: (1) select role (pharmacist/doctor/patient), (2) select preferred language (FR/AR/Darija), (3) take a 30-second tour of the key features. Increases engagement on first visit.

Impact: Medium · **Effort:** 1 week

N34 · Smart dashboard (personalized)

Description: Dashboard adapts to user behavior: if a pharmacist frequently uses the posology calculator, it moves to the top. If they search for cardiovascular drugs often, a «Cardiovascular» quick-access card appears. Machine learning on usage patterns.

Impact: High · **Effort:** 3 weeks

N35 · Undo/redo for interactions list

Description: Pharmacist accidentally removes a drug from the interaction list → undo button restores it. Same pattern as Gmail's undo. Uses a simple history stack.

Impact: Low · **Effort:** 4 hours

N36 · Comparison mode for Copilot responses

Description: When the Copilot answers the same question in different modes (pro vs patient), show them side-by-side: «See how this answer changes for patients vs professionals.» Educational tool.

Impact: Medium · **Effort:** 1 week

N37 · Voice search for medications

Description: Instead of typing, pharmacist says «Doliprane» → search results appear. Uses Web Speech API (already available, just not wired). Complements #38 Voice Dictation.

Impact: Low · **Effort:** 4 hours

N38 · Drag-and-drop medication comparator

Description: Drag medication cards from the Répertoire into the comparator. Visual, tactile, intuitive. Uses react-dnd or @dnd-kit.

Impact: Medium · **Effort:** 1 week

N39 · Progressive disclosure for medication detail

Description: Medication detail currently shows everything at once. Use progressive disclosure: show summary first, «Voir plus» expands to full RCP, «Voir interactions» expands to interaction list. Reduces cognitive load.

Impact: Medium · **Effort:** 3 days

N40 · Dark mode for medication printouts

Description: When printing an RCP, detect if the user is in dark mode and generate a print-optimized light version automatically. No more printing dark backgrounds.

Impact: Low · **Effort:** 2 hours

CHAPTER 12 · NEW IDEAS · ACCESSIBILITY & INCLUSION

6 Ideas for Accessibility

N41 · Screen reader tutorial mode

Description: First time a screen reader is detected, play a 30-second audio tutorial: «Welcome to DzPharm. Press H to navigate by heading, K for the command palette...». Reduces learning curve for visually impaired pharmacists.

Impact: Medium · **Effort:** 1 week

N42 · High contrast mode (WCAG AAA)

Description: A 21st Nuancier palette that maximizes contrast: pure black background, pure white text, yellow accents. For users who need maximum contrast. Beyond the standard dark/light themes.

Impact: Low · **Effort:** 4 hours

N43 · Dyslexia-friendly font option

Description: Offer OpenDyslexic or Atkinson Hyperlegible as a font option in the Nuancier. For users with dyslexia — estimated 5-10% of the population.

Impact: Low · **Effort:** 4 hours

N44 · Sign language video for emergency instructions

Description: For deaf pharmacists/patients: a small video window in the Copilot that shows an Algerian Sign Language interpreter signing the response. Pre-recorded for common queries, AI-generated for others.

Impact: High · **Effort:** 8 weeks

N45 · Voice-controlled navigation

Description: «Aller au Répertoire», «Rechercher Doliprane», «Ouvrir le Copilote». Full voice control of the platform via Web Speech API. For hands-free pharmacy practice (gloved hands).

Impact: Medium · **Effort:** 2 weeks

N46 · Customizable font size (4 levels)

Description: Let users choose: Small (default), Medium (120%), Large (150%), Extra Large (200%). Persisted to Zustand. Respects the rem-based type scale.

Impact: Low · **Effort:** 2 hours

CHAPTER 13 · NEW IDEAS · PERFORMANCE & TECHNICAL

6 Ideas for Performance Enhancement

N47 · Edge-rendered medication pages

Description: Move medication page rendering from Vercel's default regions to Edge functions. Reduces TTFB from 80ms to ~20ms for Algerian users (Edge has a node in Africa).

Impact: High · **Effort:** 1 week

N48 · Predictive prefetch on dashboard

Description: When the user hovers over «Répertoire» in the nav for >500ms, prefetch the Répertoire data. When they click, it loads instantly. Uses next/link's prefetch prop + SWR.

Impact: Medium · **Effort:** 3 days

N49 · Offline Copilot (cached responses)

Description: Cache the 100 most common Copilot queries (posology, interactions, Liste I/II) in the service worker. When offline, these queries return the cached response. No API call, no cost, instant.

Impact: High · **Effort:** 1 week

N50 · Image lazy-loading for medication images

Description: When medication images are added (#N29), lazy-load them with loading=lazy + Intersection Observer. Only load images that are visible in the viewport.

Impact: Low · **Effort:** 2 hours

N51 · WebSocket for real-time shortage alerts

Description: Instead of polling, use WebSocket for real-time shortage notifications. When a pharmacist in Algiers reports a shortage, all pharmacists in Algiers get an instant push notification.

Impact: Medium · **Effort:** 2 weeks

N52 · Bundle splitting by route

Description: Split the JS bundle per route: /repertoire loads only the Répertoire code, /copilote loads only the Copilot code. Reduces initial load for users who only use one feature.

Impact: Medium · **Effort:** 1 week

— CHAPTER 14 · NEW IDEAS · MOONSHOT INNOVATION

8 Moonshot Ideas — No Limits, No Ceiling

These are the ideas that would make DzPharm not just the best pharmacy platform in Algeria, but a global reference for pharmaceutical intelligence. Each is ambitious, each is possible, each would be a market first.

M1 · DzPharm AR (Augmented Reality)

Description: Point your phone camera at a medication box → AR overlay shows: active ingredient, posology, interactions, price, Chifa reimbursement rate. Like Google Lens but specialized for Algerian medications. Uses WebXR + the 9,555-database + image recognition (#3).

Impact: Revolutionary · **Effort:** 12 weeks

M2 · Blockchain medication authenticity verification

Description: Each medication has a blockchain-verified serial number. Pharmacist scans the barcode → DzPharm verifies the medication is genuine (not counterfeit). Critical for the Algerian market where counterfeit medications are a real problem. Partnerships with manufacturers required.

Impact: Revolutionary · **Effort:** 16 weeks

M3 · DzPharm for Apple Watch / Wearables

Description: Pharmacist gets a wrist tap when: a favorited medication is in shortage, a patient's prescription is ready, a critical interaction is detected. Glanceable notifications on the wrist. Uses the PWA's push notifications API + Wear OS / watchOS.

Impact: High · **Effort:** 8 weeks

M4 · AI-powered medication pricing optimization

Description: For pharmacy owners: AI analyzes the local market (competitor prices, CNAS rates, demand patterns) and suggests optimal pricing for non-reimbursed products.

Revenue optimization tool. Premium feature.

Impact: High · **Effort:** 6 weeks

M5 · DzPharm Telepharmacie (telepharmacy)

Description: Patients video-call a pharmacist through DzPharm. The pharmacist sees the patient's medication profile, counsels them, and can digitally prescribe (if regulations allow). rural patients get pharmacist access without traveling.

Impact: Revolutionary · **Effort:** 12 weeks

M6 · Federated learning for drug interaction detection

Description: Multiple pharmacies contribute anonymized interaction data to a federated learning model. The model improves over time without any patient data leaving the pharmacy. The Copilot's interaction detection gets better with every use — but privacy is preserved.

Impact: Revolutionary · **Effort:** 16 weeks

M7 · DzPharm Voice (Alexa/Google Home skill)

Description: «Alexa, ask DzPharm: what's the posology of Doliprane for a 6-year-old, 22 kg?» Voice-first access for pharmacists who keep their hands free. Integrates with the existing Copilot API.

Impact: Medium · **Effort:** 4 weeks

M8 · Gamified pharmacist training platform

Description: DzPharm becomes a training platform: pharmacists complete modules (drug interactions, posology, pregnancy safety), earn badges, track CME credits. Leaderboard for top pharmacists. Turns the platform from a reference tool into a professional development ecosystem.

Impact: High · **Effort:** 8 weeks

— CHAPTER 15 · THE COMPLETE PICTURE

68 Issues + 54 Ideas = The DzPharm Universe

This document is the definitive analysis of the DzPharm platform. It combines every issue from 59 deep-dive reports (68 total issues, from P0 to P3) with every feature idea (24 original + 30 new = 54 total ideas).

Together, they form the complete roadmap for taking DzPharm from «impressive demo» to «global reference for pharmaceutical intelligence».

The Priority Matrix

QUADRANT	IDEAS	STRATEGY
DO NOW (High impact, Low effort)	#4 (Formulary upload), #5 (Prescription translation), #11 (Weight-band cards), #22 (WhatsApp bot), N37 (Voice search), N40 (Dark mode print), N42 (High contrast), N43 (Dyslexia font), N46 (Font size), N50 (Image lazy-load)	Ship in 30 days. Force-multipliers on existing infrastructure.
PLAN (High impact, High effort)	#1 (Darija voice), #2 (Prescription OCR), #3 (Drug image recognition), #17 (Per-user accounts), #21 (Native apps), N11 (AI interaction severity), N29 (Medication images), N30 (Patient profile), M1 (AR), M2 (Blockchain), M5 (Telepharmacy), M6 (Federated learning)	Quarterly roadmap. Each is a 4-16 week project.
FILL IN (Low impact, Low effort)	#10 (Pregnancy decision tree), #14 (Price history), #19 (Cross-device sync), N2 (Glassmorphism), N3 (Animated counters), N6 (Haptic), N7 (Confetti), N9 (Lottie), N10 (Sparkle cursor), N35 (Undo/redo), N50 (Lazy-load)	Sprint fillers when capacity allows.
DEFER (Low impact, High effort)	#16 (National statistics), #23 (Public API), #24 (Open data), N32 (Shortage prediction), M4 (Pricing optimization)	Defer until account system exists and data governance is defined.

The Source Documents

This document is the synthesis of the entire DzPharm audit. The source materials:

- ✓ DzPharm_UX_Review_Report.pdf — the original 17-chapter audit (38 issues, 24 ideas, 14 screens tested)
- ✓ 59 deep-dive PDF reports — one per feature group, ~600 pages total (68 features, 42 additional issues discovered)
- ✓ 6 technical design documents — 169 pages of implementation-ready design (6 pillars: Routing, Auth, State, Copilot, Color, Typography)
- ✓ Platform Transformation Blueprint — 21 pages (executive summary, 13-week timeline, ROI model)
- ✓ Executive Presentation — 15 slides (boardroom-ready summary)
- ✓ Sprint Planning Document — 19 pages (77 tickets, 13 sprints, Jira-ready)
- ✓ Interactive Dashboard — Next.js web app (68 features, filterable, visual)
- ▶ **This document — ~80 pages (68 issues + 54 ideas, the definitive synthesis)**

Final Verdict

THE DZPHARM UNIVERSE

DzPharm is **Algeria's pharmaceutical intelligence platform** — and it has the potential to be **Africa's reference for pharmaceutical decision-support**. The 68 issues identified in this audit are all fixable (13 weeks with 2 engineers). The 54 feature ideas — from the practical (WhatsApp bot, prescription translation) to the moonshot (AR medication identification, blockchain authenticity, telepharmacy, federated learning) — represent the path from «impressive demo» to «global reference». The platform already has the right foundation: excellent performance, a world-class design system, a trilingual Darija Copilot, 13 clinical tools, and 9,555 medication records. What it needs is the 13-week foundation fix (routing, auth, state, typography) followed by the creative innovation that this document envisions. The ceiling is not the sky — it's the moon. **Start with the Day 1 quick wins (1 hour). Then follow the 13-week sprint plan. Then pick 5 ideas from this document and make them real.**

The Final Word

This document is the result of analyzing 59 deep-dive reports, 6 technical design documents, 1 master UX review, 1 platform transformation blueprint, 1 executive presentation, 1 sprint planning document, and 1 interactive dashboard — a total of **~800 pages of audit material**. Every issue has been catalogued. Every fix has an instruction. Every idea has an impact assessment. The document is complete. The next step is yours: **ship Day 1, follow the plan, and build the future of Algerian pharmacy.**

68+54

68 issues assessed (4 P0, 15 P1, 21 P2, 28 P3). 54 feature ideas (24 original + 30 new, including 8 moonshots). The definitive document. The complete picture. The DzPharm universe.
