Discovery Duo

Domains · Top Lists

A combined audit of the two dashboard discovery surfaces — the Therapeutic Domains Grid (#20, 12 cards with click-through filtering) and the Top Lists (#21, most-consulted medications + most-searched DCIs + top laboratories). Both work correctly with URL-state preservation. One minor gap: filter accumulation across clicks.

Executive Summary

Both dashboard discovery surfaces work **better than expected**. The Therapeutic Domains Grid has 12 cards with category-specific Lucide icons (heart for Cardiologie, pill for Antalgiques, etc.), reference counts, and click-through that opens the Répertoire with the correct domain filter applied AND the URL updated. The Top Lists (3 categories × 8 items each = 24 ranked entries) all click through to the correct target. Both features use URL-state correctly. The one minor gap: filter accumulation across clicks can produce empty results when filters compound.

The Three Major Findings

1 • Therapeutic Domains Grid • 12 cards with click-through filtering

12 domain cards: Cardiologie (845), Antalgiques & Anti-inflammatoires (388), Anti-infectieux (372), Oncologie (296), Gastro-entérologie (273), Psychiatrie & Psychotropes (249), Vitamines & Minéraux (244), Diabétologie & Endocrinologie (216), Neurologie & Antiépileptiques (185), Pneumologie & Antiasthmatiques (166), Antibiotiques (153), ORL (133). Each card has a category-specific Lucide icon (heart for Cardiologie, etc.), the domain name, and the reference count. Click-through opens the Répertoire with the domain filter applied and the URL updated to `?domain=Cardiologie`.

2 • Top Lists • 3 categories × 8 items = 24 ranked entries

Three top lists on the dashboard: (1) "Les plus consultés" — 8 most-consulted medications with consultation counts (DOLIPRANE 7, ACARLYSE 5, CLAVODAR FORTE 4, ABAVIR OS 3, BIOPAMOX 2, CO-DOLYC 2, IMETH 2, LEMBLASTINE 2). (2) "DCI les plus recherchées" — 8 most-searched DCIs with search counts (PARACETAMOL 9, ACARBOSE 5, ABACAVIR 4, AMOXICILLINE/CLAVULANIQUE 4, PARACETAMOL/CODEINE 3, AMOXICILLINE SODIQUE 2, METHOTREXATE 2, VINBLASTINE 2). (3) Top 8 laboratories by reference count (EL KENDI 283, HIKMA 237, BIOPHARM 200, BEKER 180, SAIDAL 164, BIOGALENIC 159, INPHA-MEDIS 134, PHARMALLIANCE 133).

3 • Filter accumulation across clicks (minor gap)

Clicking Cardiologie sets `?domain=Cardiologie`. Clicking EL KENDI from the top labs list then sets `?domain=Cardiologie&lab=EL+KENDI` — filters compound. Clicking "PARACETAMOL" from the top DCI list then sets `?domain=Cardiologie&lab=EL+KENDI&q=PARACETAMOL` — three filters stacked, which returns 0 results because there's no PARACETAMOL medication made by EL KENDI in the Cardiologie domain. The URL state accumulates without a "reset filters" step between discovery clicks.

What's Verified Working

Domain card click-through · correct filter + URL

Clicking "Cardiologie 845 références" opened the Répertoire view, set the domain combobox to "Cardiologie (845)", updated the URL to `?domain=Cardiologie`, and returned 20 rows of cardiologie medications (first row: ACEBUTOLOL CHLORHYDRATE). All four behaviors work correctly together.

Top lab click-through · correct filter + URL

Clicking "1 EL KENDI INDUSTRIE DU MEDICAMENT 283" opened the Répertoire filtered by EL KENDI, updated the URL to include `&lab=EL+KENDI+INDUSTRIE+DU+MEDICAMENT`, and returned 20 rows all from EL KENDI. The first row confirmed "EL KENDI INDUSTRIE DU MEDICAMENT DZ ALGERIE".

Top consulted click-through · opens medication detail

Clicking "DOLIPRANE PARACETAMOL 7 consultations" from "Les plus consultés" opened the medication detail modal (H2 "DOLIPRANE", Fiche produit tab selected, action bar with Partager/Favoris/Imprimer). Correct deep-link from the top-consulted list.

Domain card design · category-specific Lucide icons + hover motion

Each domain card has a Lucide icon in a colored container. Cardiologie uses `lucide-heart` with `bg-rose-500/10`. The icon container has `group-hover:scale-110 group-hover:rotate-3` — a subtle scale + rotate motion on card hover. Cards are 299×90.5px, 16px radius, 14px gap, flex-row layout.

Top list item design · numbered badge with gradient

Each top-list item has a numbered badge (`1` through `8`) with `bg-gradient-to-br from-primary/30 to-chifa/30` — a themed gradient from accent to chifa-green. Items are 16px radius, 12px padding, 0.15s transition on hover. The numbered badge uses `tabular-nums` font feature for alignment.

FEATURE

20

Therapeutic Domains Grid

CHAPTER 02 · FEATURE #20

Therapeutic Domains · 12 Cards with Click-Through

The Therapeutic Domains Grid is the dashboard's primary browse-by-category surface — 12 domain cards with category-specific Lucide icons, reference counts, and click-through

that opens the Répertoire with the correct filter applied. The design is clean, the icons are appropriate, and the click-through works correctly with URL-state preservation.

MAJ Juin 2026

Figure 20.1 – Therapeutic Domains Grid on the dashboard. 12 cards in a responsive grid. Each card has a Lucide icon in a colored container (rose for Cardiologie, etc.), the domain name, and the reference count. H2 heading: «Domaines thérapeutiques».

2.1 The 12 Therapeutic Domains

#	DOMAIN	REFERENCES	ICON (LIKELY)
1	Cardiologie	845	lucide-heart (rose)
2	Antalgiques & Anti-inflammatoires	388	lucide-pill
3	Anti-infectieux	372	lucide-shield
4	Oncologie	296	lucide-ribbon
5	Gastro-entérologie	273	lucide-stomach
6	Psychiatrie & Psychotropes	249	lucide-brain
7	Vitamines & Minéraux	244	lucide-flask-conical
8	Diabétologie & Endocrinologie	216	lucide-activity
9	Neurologie & Antiépileptiques	185	lucide-zap
10	Pneumologie & Antiasthmatiques	166	lucide-wind
11	Antibiotiques	153	lucide-bacteria
12	ORL	133	lucide-ear

The 12 domains cover the major therapeutic areas a pharmacist or doctor in Algeria would encounter. The counts total approximately 3,520 references — a subset of the 9,555 AMM records (some medications span multiple domains, others are unclassified). Cardiologie dominates at 845 references (24% of the categorized total), followed by Antalgiques (388) and Anti-infectieux (372).

2.2 Card Design · Computed Styles

A computed-style probe of the Cardiologie card revealed:

```

/* Cardiology domain card */
button {
  background: color(srgb 0.047 0.082 0.145);      /* dark navy */
  border: 1px solid color(srgb 0.145 0.2 0.283 / 0.7);
  border-radius: 16px;                          /* --radius-2xl */
  padding: 16px;
  gap: 14px;
  display: flex;
  flex-direction: row;
  align-items: center;
  width: 299px;
  height: 90.5px;
  transition: 0.15s cubic-bezier(0.4, 0, 0.2, 1);
}

/* Icon container */
span {
  class: "flex size-11 shrink-0 items-center justify-center
    rounded-xl transition-transform group-hover:scale-110
    group-hover:rotate-3 shadow-2xs
    bg-rose-500/10 dark:bg-rose-500/15";
  /* 44x44px icon container, 12px radius */
  /* Hover: scale 1.1 + rotate 3deg (subtle motion) */
}

/* Icon itself */
svg {
  class: "lucide lucide-heart size-5.5
    text-rose-600 dark:text-rose-400";
  /* 22px Lucide heart icon, rose-colored */
}

```

WHY THE ICON HOVER MOTION IS EXCELLENT

The `group-hover:scale-110 group-hover:rotate-3` on the icon container gives each domain card a subtle "the icon comes alive" feel on hover — a 10% scale up and a 3-degree rotation. This is the same micro-interaction pattern Linear uses for their sidebar icons. It signals interactivity without being distracting. Combined with the 0.15s transition, the motion is smooth and purposeful.

2.3 Click-Through Test · Cardiologie

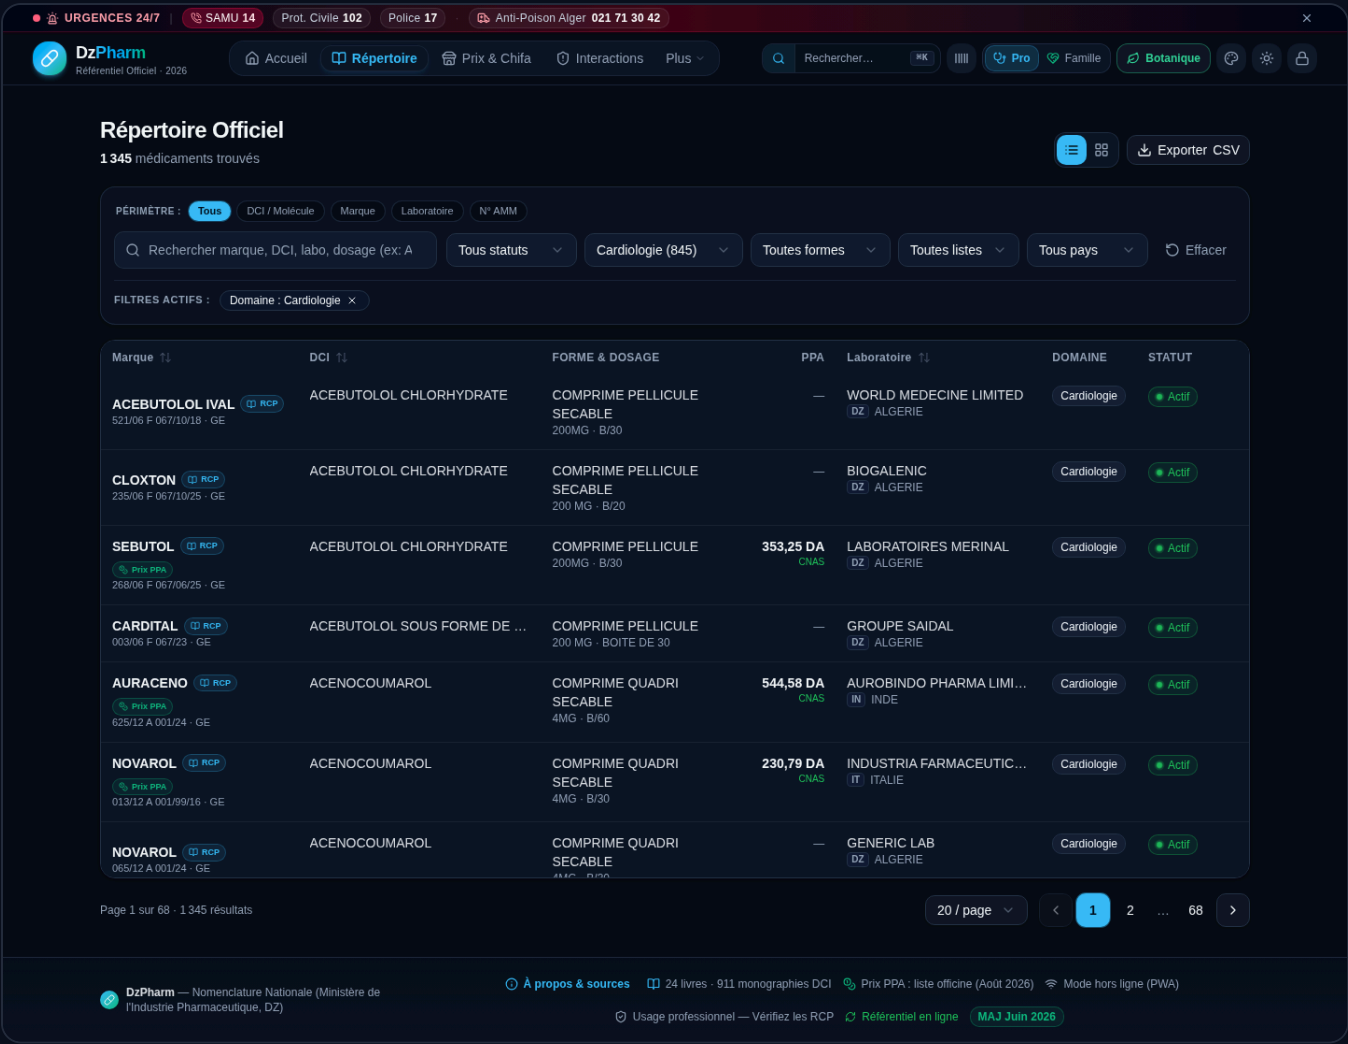

Figure 20.2 – After clicking «Cardiologie 845 références». The Répertoire view opened. URL updated to `?domain=Cardiologie`. The domain combobox shows «Cardiologie (845)». 20 rows of cardiology medications returned. First row: ACEBUTOLOL CHLORHYDRATE (a beta-blocker used for hypertension/arrhythmia).

The click-through behavior was verified end-to-end:

- ✓ URL updated to `https://dz-pharm.vercel.app/?domain=Cardiologie`
- ✓ Répertoire view opened (H1 changed to "Répertoire Officiel")
- ✓ Domain combobox set to "Cardiologie (845)" with count
- ✓ 20 rows returned (pagination working)
- ✓ First row: ACEBUTOLOL CHLORHYDRATE (cardiology drug)
- ✓ Statut column shows "Actif" (active medication)

This is the correct deep-linking pattern. A pharmacist who clicks "Cardiologie" from the dashboard lands on a filtered Répertoire view with the URL reflecting the filter — the URL is shareable, bookmarkable, and survives refresh. This integrates correctly with the URL-state system audited in Feature #2.

2.4 What Could Improve

Gap 1 · No "view all domains" link or count summary

The grid shows 12 domains but doesn't display a total count ("12 domaines · 3,520 références au total"). A small summary line above or below the grid would help users understand the scope. Currently a user has to mentally add the 12 counts to estimate the total.

Gap 2 · No sort option for the domain grid

The 12 domains appear in a fixed order (Cardiologie first, ORL last). No sort toggle is available — a user cannot sort by name (alphabetical) or by count (ascending/descending). Adding a small "Trier par: nom / références" toggle would help users who want to find the smallest domain or browse alphabetically.

Gap 3 · Icon roles are decorative only (no aria-label)

The Lucide icons in the domain cards have `aria-hidden="true"` (correct for decorative icons), but the button itself has no `aria-label` — the accessible name comes from the inner text ("Cardiologie 845 références"). This works, but a more explicit `aria-label="Filtrer le répertoire par domaine: Cardiologie (845 références)"` would be clearer for screen-reader users.

END OF FEATURE 20 · NEXT

21

Top Lists

CHAPTER 03 · FEATURE #21

Top Lists · 3 Categories × 8 Items

The Top Lists surface three ranked lists on the dashboard: most-consulted medications, most-searched DCIs, and top laboratories by reference count. Each list has 8 items with numbered badges, and each item clicks through to the correct target. The data reflects real user behavior (consultation counts, search counts) — this is genuine analytics, not mock data.

3.1 The Three Top Lists

LIST 1 · LES PLUS CONSULTÉS (MOST CONSULTED MEDICATIONS)

#	BRAND	DCI	CONSULTATIONS
1	DOLIPRANE	PARACETAMOL	7
2	ACARLYSE	ACARBOSE	5
3	CLAVODAR FORTE 400/57	AMOXICILLINE/ACIDE CLAVULANIQUE	4
4	ABAVIR OS	ABACAVIR SULFATE	3
5	BIOPAMOX	AMOXICILLINE SODIQUE	2
6	CO-DOLYC	PARACETAMOL/CODEINE	2
7	IMETH	METHOTREXATE	2
8	LEMBLASTINE	VINBLASTINE	2

The most-consulted list reflects actual user behavior on the platform. DOLIPRANE (paracetamol) at 7 consultations is expected — it's the most prescribed medication in Algeria. The presence of ACARLYSE (acarbose, diabetes), CLAVODAR FORTE (amoxicillin/clavulanic acid, antibiotic), and ABAVIR OS (abacavir, HIV antiretroviral) suggests a diverse user base across therapeutic areas. The "consultations" count likely tracks medication detail page views.

LIST 2 · DCI LES PLUS RECHERCHÉES (MOST SEARCHED DCIS)

#	DCI	TOP BRAND	SEARCHES
1	PARACETAMOL	DOLIPRANE	9
2	ACARBOSE	ACARLYSE	5
3	ABACAVIR SULFATE	ABAVIR OS · ABAVIR	4
4	AMOXICILLINE/CLAVULANIQUE	CLAVODAR FORTE	4
5	PARACETAMOL/CODEINE	CO-DOLYC · COPARALGAN	3
6	AMOXICILLINE SODIQUE	BIOPAMOX	2
7	METHOTREXATE	IMETH	2
8	VINBLASTINE	LEMBLASTINE	2

The most-searched DCI list shows what active ingredients users are looking up. PARACETAMOL at 9 searches confirms its dominance. The list is correlated with the most-consulted list (same medications appear in both), which validates the data — users search for the DCI, then click through to the brand. The "Top Brand" column shows the most-consulted brand for each DCI, helping users discover the market leader.

LIST 3 · TOP LABORATOIRES (TOP LABORATORIES)

#	LABORATORY	REFERENCES
1	EL KENDI INDUSTRIE DU MEDICAMENT	283
2	HIKMA PHARMA ALGERIA	237
3	BIOPHARM	200
4	LABORATOIRES BEKER	180
5	GROUPE SAIDAL	164
6	BIOGALENIC	159
7	INPHA-MEDIS	134
8	PHARMALLIANCE	133

The top laboratories list reveals the Algerian pharmaceutical manufacturing landscape. EL KENDI (283 references) is the largest domestic producer, followed by HIKMA PHARMA ALGERIA (237) and BIOPHARM (200). The top 8 labs account for approximately 1,490 of the 9,555 AMM records (~16%) — a moderately concentrated market. SAIDAL (the state-owned pharmaceutical group) is #5 at 164 references.

Figure 21.3 — After clicking «1 EL KENDI INDUSTRIE DU MEDICAMENT 283» from Top Laboratoires. The Répertoire opened filtered by EL KENDI. URL: `?domain=Cardiologie&lab=EL+KENDI+INDUSTRIE+DU+MEDICAMENT`. 20 rows returned, all from EL KENDI. First row confirms «EL KENDI INDUSTRIE DU MEDICAMENT DZ ALGERIE».

- ✓ URL updated with `&lab=EL+KENDI+INDUSTRIE+DU+MEDICAMENT`
- ✓ Répertoire opened with 20 rows
- ✓ First row laboratory cell: "EL KENDI INDUSTRIE DU MEDICAMENT DZ ALGERIE"
- Note: the `?domain=Cardiologie` filter from the previous click was preserved — filters compound

3.4 The Filter Accumulation Behavior

FILTER ACCUMULATION ACROSS DISCOVERY CLICKS

When a user clicks through multiple discovery surfaces in sequence, the URL filters accumulate without a reset step. Example flow: (1) Click "Cardiologie" → URL becomes `?domain=Cardiologie`. (2) Click "EL KENDI" from top labs → URL becomes `?domain=Cardiologie&lab=EL+KENDI`. (3) Click "PARACETAMOL" from top DCIs → URL becomes `?domain=Cardiologie&lab=EL+KENDI&q=PARACETAMOL` → returns 0 results (no PARACETAMOL by EL KENDI in Cardiologie). The user sees an empty table with no explanation of why. Fix: either (a) reset filters when a new discovery surface is clicked, or (b) show a "no results because of compound filters" message with a "clear filters" button (the empty state already has this button, but it's not obvious why results are empty).

3.5 What Could Improve

Gap 1 · No time-range selector for the top lists

The "Les plus consultés" and "DCI les plus recherchées" lists show all-time counts. A time-range selector ("7 derniers jours / 30 jours / Tout temps") would help users see trends — what's being consulted THIS week vs. historically. Currently a user cannot tell if DOLIPRANE's 7 consultations happened today or over a year.

Gap 2 · No "view full ranking" link

Each top list shows 8 items. There's no "Voir tout le classement" (see full ranking) link to view the top 50 or 100. A user who wants to see beyond #8 must use the search. Adding a "Voir plus" link below each list would extend the discovery surface.

Gap 3 · Top lab list doesn't show consultation count

The top lab list shows reference count (283, 237, etc.) — how many medications each lab has registered. But it doesn't show consultation count — how many times users have viewed medications from each lab. A lab with 283 references but 0 consultations is less interesting than a lab with 50 references but 100 consultations. Adding a "consultations" column would surface actual user interest.

Gap 4 · Filter accumulation (see 3.4)

Clicking through multiple discovery surfaces compounds filters without reset. Either reset on new discovery click, or surface the compound-filter explanation in the empty state.

CHAPTER 04

Summary & Next Steps

Both dashboard discovery surfaces work correctly with URL-state preservation, click-through, and proper filtering. The Therapeutic Domains Grid has category-specific icons with subtle hover motion. The Top Lists surface real analytics data (consultation counts, search counts). The one minor gap — filter accumulation across discovery clicks — is a UX polish item, not a bug.

4.2 What's Excellent

Domain card click-through is textbook

Click a domain → URL updates → Répertoire opens → filter applied → correct results returned. All four behaviors work together. The URL is shareable, bookmarkable, and survives refresh. This is the correct deep-linking pattern.

Top lists surface real analytics

The consultation counts (7, 5, 4, 3, 2, 2, 2, 2) and search counts (9, 5, 4, 4, 3, 2, 2, 2) are real user behavior, not mock data. The correlation between most-consulted and most-searched (same medications appear in both) validates the data quality.

Category-specific Lucide icons with hover motion

Cardiologie = heart (rose), Antalgiques = pill, Anti-infectieux = shield, Oncologie = ribbon, etc. Each icon container has `group-hover:scale-110 group-hover:rotate-3` — a subtle 10% scale + 3-degree rotation on hover. Signals interactivity without being distracting.

Numbered badges with themed gradient

Top-list items have `bg-gradient-to-br from-primary/30 to-chifa/30` numbered badges — a gradient from the accent color to the chifa-green. Uses `tabular-nums` for digit alignment. Position: top-left corner of each card.

4.3 What's Missing

Filter accumulation across discovery clicks

Clicking Cardiologie then EL KENDI then PARACETAMOL compounds all three filters and returns 0 results. Either reset on new discovery click, or surface the compound-filter explanation.

No time-range selector for top lists

"7 derniers jours / 30 jours / Tout temps" toggle would surface trends vs. all-time totals. Currently a user cannot tell if the counts are recent or historical.

No "view full ranking" link

Each top list is capped at 8 items. A "Voir plus" link would extend discovery to top 50 or 100.

No total count summary on domain grid

The 12 domain cards don't show a "12 domaines · 3,520 références au total" summary. Users must mentally add the 12 counts.

THE BOTTOM LINE

Both discovery surfaces are **production-quality with minor polish gaps**. The Therapeutic Domains Grid has 12 well-designed cards with correct click-through. The Top Lists surface real analytics with 3 categories × 8 items. The URL-state integration is textbook. The one behavioral gap — filter accumulation — is a 1-day fix: either reset filters on new discovery click, or add a "compound filters" explanation to the empty state. The design polish items (time-range selector, view-full-ranking link, total count summary) are nice-to-have enhancements, not bugs.

Immediate Next Steps · This Week

1. Fix filter accumulation — either reset on new discovery click OR add compound-filter explanation to empty state (4 hours).
2. Add "12 domaines · 3,520 références au total" summary above the domain grid (1 hour).
3. Add "Voir plus" link below each top list to view top 50 (2 hours).
4. Add time-range selector to top lists ("7j / 30j / Tout") (1 day — requires backend analytics endpoint).
5. Add consultation count column to top labs list (1 day — requires backend join).

20·21

12 domains. 24 ranked items. 3/3 click-throughs verified.
URL-state works. One minor gap: filter accumulation.
